How to migrate from Locus Map Classic to Locus Map 4

Locus Map is a complex software with many customization options. Before the transfer of your data from Locus Map Classic to Locus Map 4, please pay attention to the following:
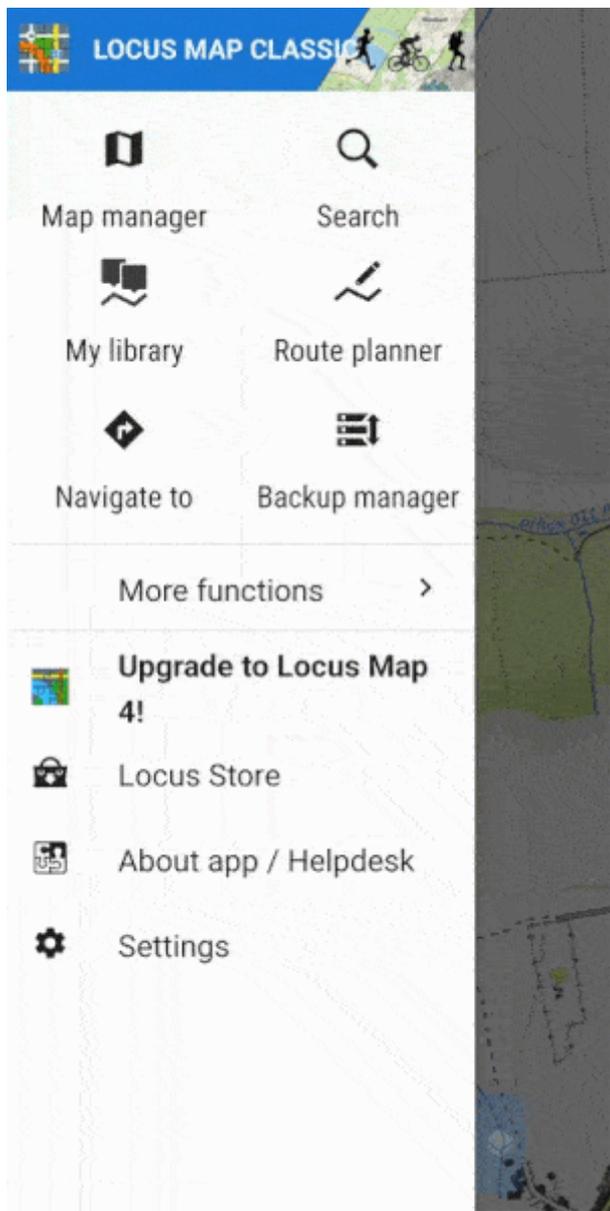

- **Move the main app directory to the internal storage of your phone or tablet.**
- **Set all custom subdirectories to the default within the main app directory.**

Seamless upgrade

> **Valid for Locus Map Classic version 3.70.17 and newer.** Please update your app to this version before proceeding.

- Tap **Upgrade to Locus Map 4!** in the Locus Map Classic main menu
- You are redirected to Google Play to **install Locus Map 4** (if you have already installed Locus Map 4 before, this step is skipped). After installing LM4, get back to LM Classic.
- Back in Locus Map Classic, a **migration backup file is automatically created**. It contains all your data – tracks, routes, points, maps and settings
- When done, Locus Map 4 is started and the **migration backup is restored** in it
- **Restart Locus Map 4 and you're done!**

To get the discount of 100% on Premium Silver and 50% on Premium Gold, log in with the same Locus account you used in Locus Map Classic.

Android 6 - 10

> ⚠️
> - **It is not possible to use both Locus Map 4 and Locus Map Classic with one shared directory.** LM 4 uses a different database structure. Installing LM 4 in the same directory converts the database to LM 4 version and disables LM Classic from reading the database.
> - To prevent converting the LM Classic Library, **make sure the main directory of Locus Map Classic is moved to the private sector in the Android/data folder** before installing Locus Map 4.

After the measures above, you may perform the seamless upgrade as described in the first paragraph.
