Moving Locus to a new device or SD card

Question

I have purchased a new device/a new SD card. How am I supposed to move Locus into the new device and continue using all the data and settings?

Answer

It is necessary to **backup all Locus Map data and settings**:

- Data - maps, points, tracks
- Settings – your personally defined colors, function settings

To keep all data, please follow these instructions:

- Make a full backup with the help of Backup > Backup all
- Locus directory is located in Menu > Information > Locus

If you have new device:

- Copy the entire Locus directory from the old device into the new one
- Install the latest version of the Locus application from the Google Play into the new device

If you have a new SD Card

- Copy the whole Locus directory from the old SD card to the new one
- Start Locus
- Use Backup function to restore all data
