# Navigation along a route

🔧 **Fix Me!** RECONSTRUCTION 🔧 **Fix Me!**

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route folders.

Instructions

- **select a route** from the Data manager and tap it for details >>

- tap ◈ navigation button in the bottom panel and select **Navigation**

- OR **tap a route** displayed on map > tap ❯ button on the label > select ◈ Navigation/guidance > **Navigation**

ℹ️ Locus Map automatically generates navigation commands along the route. If you need to

be navigated in **reverse direction**, make a copy of the route and check both the "Change track orientation" and "Generate commands" options in the copy dialog.

If you want to be navigated strictly along the selected route (e.g. on a bike), check "Strict route navigation" and un-check "Automatic recalculation" in the navigation settings.
