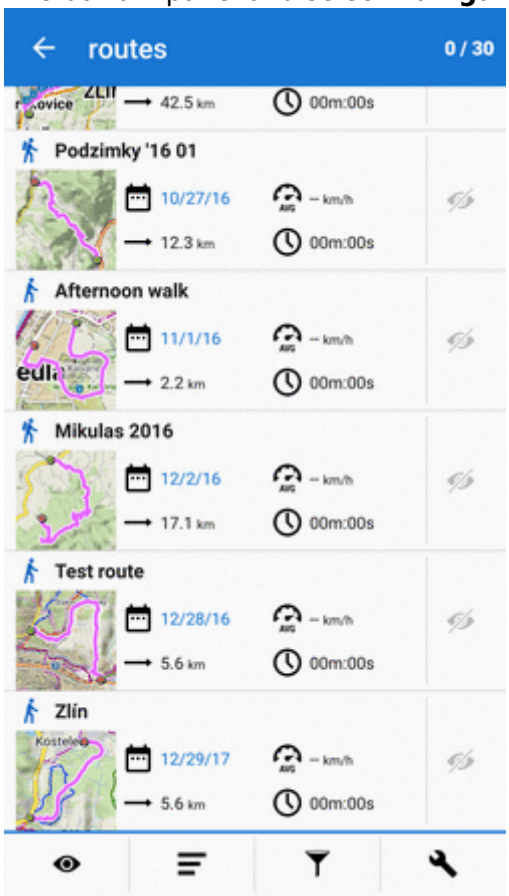
Navigation along a route

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route database.

1. Select a Route

From Track/route manager

1. **select a route** and tap it to display its detail screen >>
2. tap navigation button in the bottom panel and select **Navigation**



On map

1. **find** your route on map and **tap it**

2. tap ❯ on the popup
3. select **Navigation/guidance** > **Navigation**

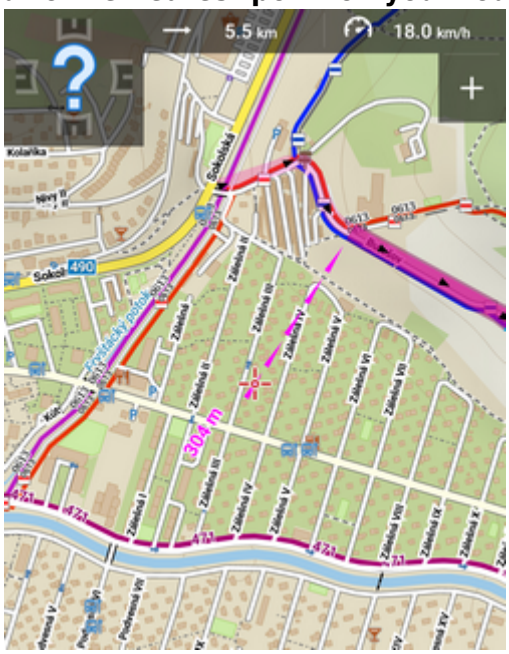
Locus Map **automatically generates navigation commands** along the route in places of the most remarkable direction changes.

If you need to be navigated in **reverse direction**, make a **copy of the route** and check both the **Change track orientation** and **Generate commands** options in the copy dialog.

2. START Navigation

- **At the start of the route**

- **Away from the start of the route**
  In this case Locus **guides you to the nearest point on your route**.



- **Away from the start of the route - auto recalculation**
  If you have **auto-recalculation with route priority** set, the selected routing service **calculates route to the start of your navigated route**.

Auto-recalculation with point priority ignores your selected route and creates a new route to the nearest via point or directly to the finish.
