Navigation Along a Route
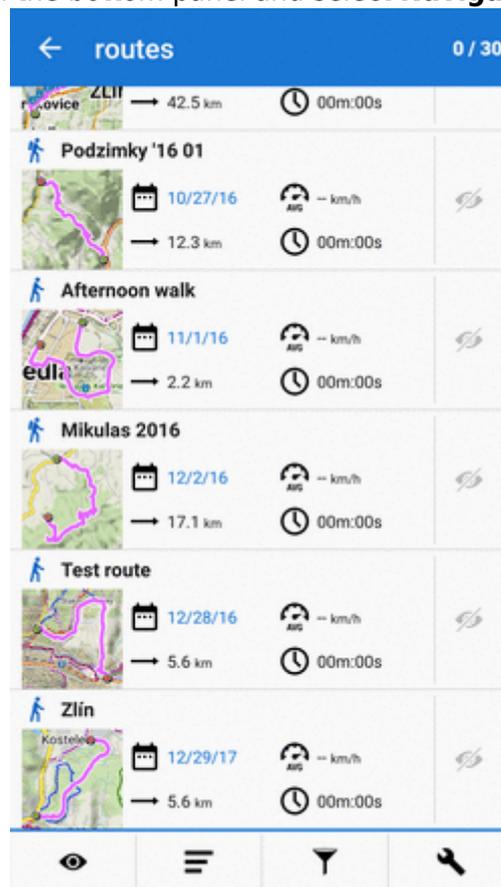

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route database.

1. Select a Route

From Track/route manager

1. **select a route** and tap it to display its detail screen >>

2. tap ◆ navigation button in the bottom panel and select **Navigation**

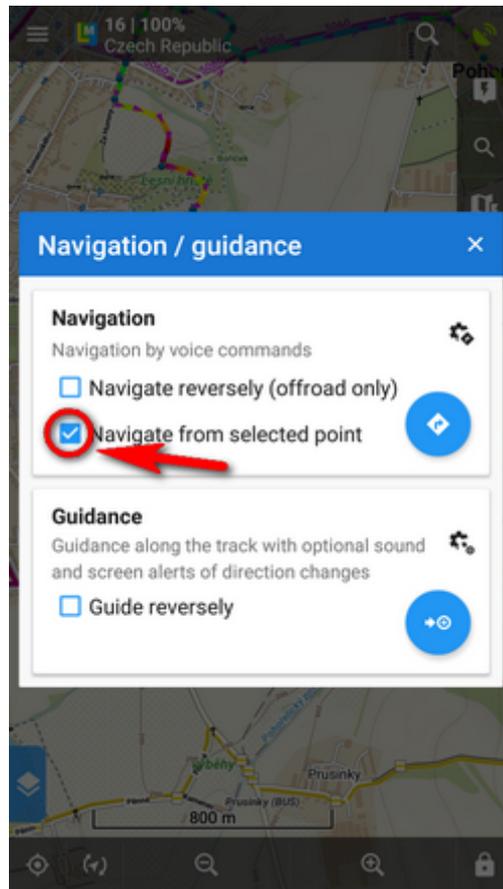

On map

1. **find** your route on map and **tap it**

2. tap **>** on the popup

3. select 🔜 **Navigation/guidance** > **Navigation**

4. check **Navigate from selected point** if you want to be navigated from the place you tapped. Otherwise you'll be navigated from the nearest place on the route to your actual location

Locus Map **automatically generates navigation commands** along the route in places of the most remarkable direction changes.
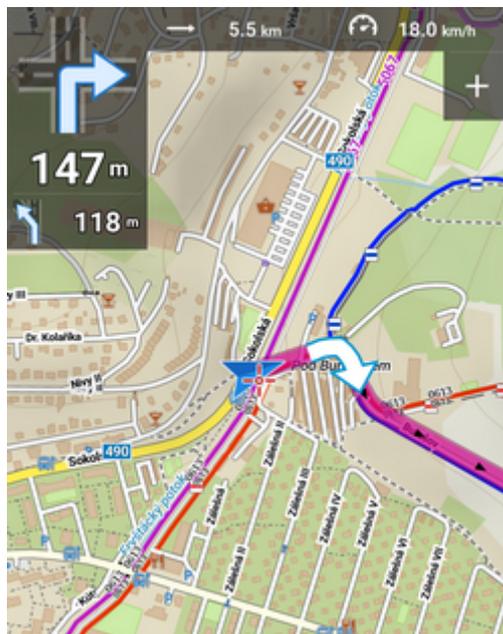

Reverse direction

To be navigated in **reverse direction** of the route, check "Navigate reversely":

⚠️ Navigation commands on a reversed route may not reflect traffic situation accurately. **Recommended for offroad use only!**
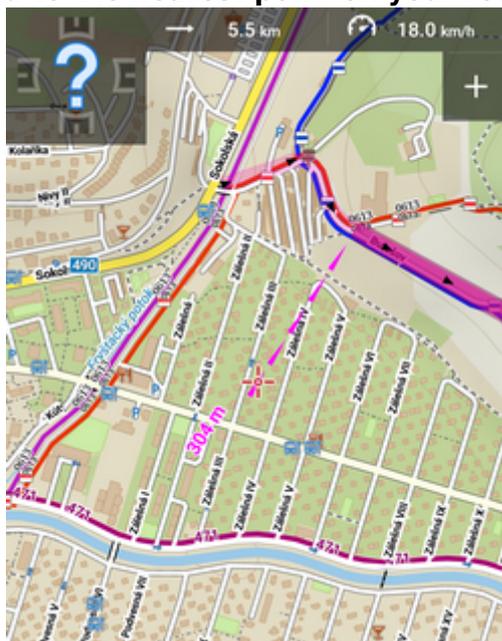

2. START Navigation
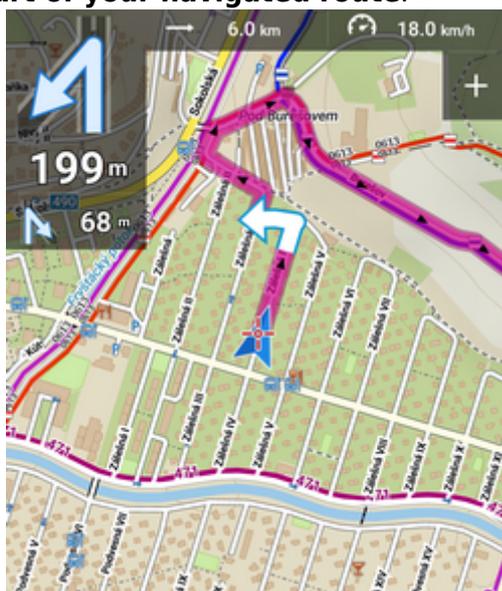

- **At the start of the route**

- **Away from the start of the route**
  In this case Locus **guides you to the nearest point on your route**.

- **Away from the start of the route - auto recalculation**
  If you have **auto-recalculation with route priority** set, the selected routing service **calculates route to the start of your navigated route**.

⚠️ **Auto-recalculation with point priority ignores your selected route and creates a new route to the nearest via point or directly to the finish.**
