Items Management

Data Manager

Items are managed in **Items tab** of the **Data Manager**:

- Main screen > Top Panel > Data manager > Items tab
- Main Menu > Data > Items tab

Top panel

- .... **Clear** - removes all temporary items from map. Even those that are not listed in the Items tab (imported with *Only display* option checked). This button can be inserted in Function panel for quick use
- .... **Add** - opens Locus file manager to copy selected items into the **MapItems** directory - items working folder ☐ potřeba dodělat v app

Items management screen

Contains **list of folders with items** beginning with the main working folder **MapItems**. When there are no items in this folder, then the list is empty. Subordinate folders queue bellow. Some subfolders create automatically during a particular process, e.g. linking files from certain web service clients. Some subfolders have to be created externally in a file manager of the device.

Items list

- **icon** - indicates format of the item (only **supported formats** - tracks&points - are visible)
- **item file name** including suffix
- **action menu**:
  - ... *Details* - displays item basic info screen - filename, size, date, description if there is any etc.
  - ... *Import* - launches import of the item, as it is described [here >>](#) or [here >>](#). After the import the item's content does not function as an autonomous object, it is implemented in the application data manageable in the Data manager Points or Tracks tabs.
  - ... *Delete* - removes the item from the MapItems directory and from the items list
