

Personal Maps Settings

Menu > Settings > Maps - advanced > Personal maps

Map auto-load

Enables automatic loading of maps (SQLite-based) according to actual GPS position. There is no need to select maps when out of one, Locus Map switches it on automatically. There are three options:

- *no map auto-load*
- *auto-load maps of identical type only* (e.g. SQL - SQL or MBT - MBT)
- *auto-load maps of any type* - at first Locus Map checks availability of identical map type and then switches on map of any type covering the desired area
