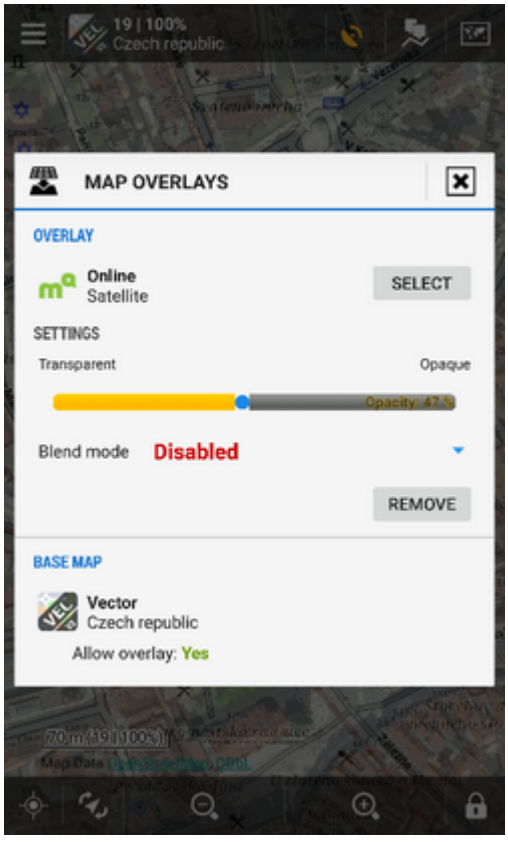

Map Overlays

About

- Menu > More > Map Overlays

This feature enables laying **two maps over each other** in semi-transparent mode so that it is possible to compare their details, coverage, accuracy etc. This option is available only to Locus Map Pro users.

1. Select your background map

Choose from your map portfolio:

- *Online maps*
- *Personal maps*
- *Locus Maps*

2. Select your overlay map

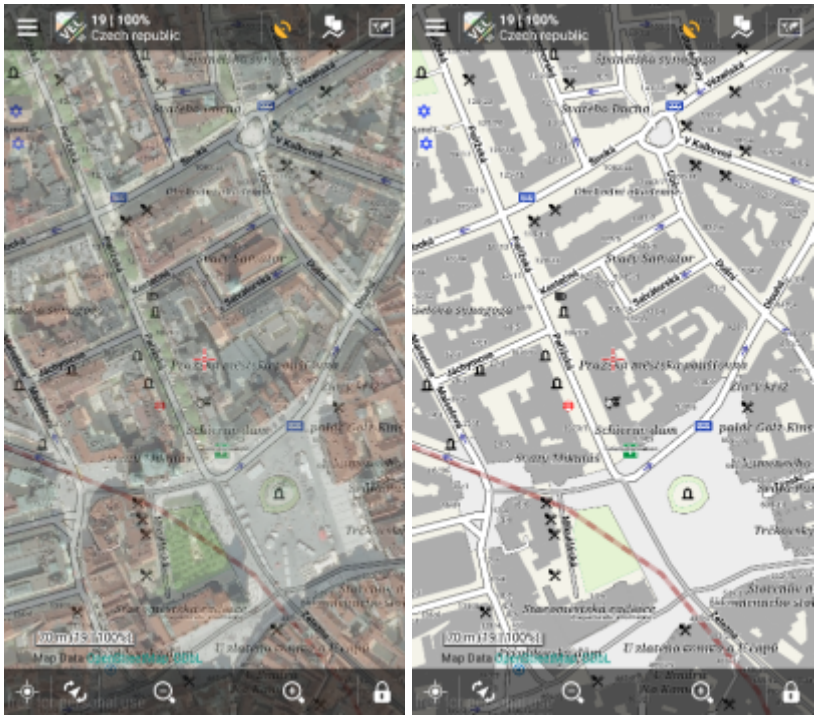

Select the function in *Menu* > *More* > *Map Overlays*. Again you can choose any map available in the **Maps Manager**.

3. Set opacity and blend mode

- Adjust *opacity* with the *slider* from opaque to transparent.
- Select *blend mode* of the two maps if necessary. The option can be *disabled*.
- Close the dialog and enjoy your two maps overlaid.
- If you want to switch the function off, tap *Remove* and close the window

Example

Locus Maps center of Prague with and without satellite image map overlay:
