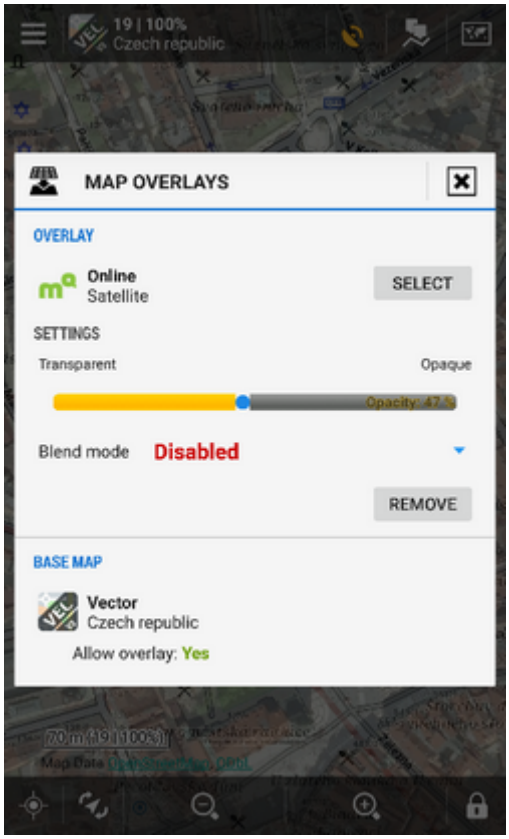

Map Overlays

About

- Menu > More functions > Map Overlays

This feature enables laying **two maps over each other** in semi-transparent mode so that it is possible to compare their details, coverage, accuracy etc. This option is available only to Locus Map Pro users.

1. Select your background map

Choose from your map portfolio:

- *Online maps* - all except SmartMaps
- *Offline maps* - vector maps (.MAP format), SQLite, MBT or GEMF (other formats are not

supported)

2. Select your overlay map

Select the function in *Menu* > *More functions* > *Map Overlays*. Supported formats are the same as for the background map.

3. Set opacity and blend mode

- Adjust *opacity* with the *slider* from opaque to transparent.
- Select *blend mode* of the two maps if necessary. The option can be *disabled*.
- Close the dialog and enjoy your two maps overlaid.
- If you want to switch the function off, tap *Remove* and close the window

Example

LoMaps center of Prague with and without satellite image map overlay:
