

Quick New Point

This function is available in Locus Map Pro only

About

Quick new point is designed for situations when you need to add more similar points at once or repeatedly during a time period.

Create a new point definition

The screenshot shows the 'EDIT' dialog for creating a new point definition. It has a title bar with a pencil icon, the word 'EDIT', and a close button. The dialog is divided into several sections:

- NAME OF THE DEFINITION**: A text input field with the placeholder 'Name of the definition (Optional)'.
- DEFINITION**: A section header.
- STORAGE**: A section with two options:
 - Favorites** (4 / 4): Includes the sub-option 'Save current center of map'.
 - Track recording**: Includes the sub-option 'Save current location'.
- ICON & NAME**: A section with an icon selection button (an 'i' in a square) and a text input field containing 'Point {c}'. A plus sign button is to the right.
- DESCRIPTION**: A text input field with the placeholder 'Description'.

An 'OK' button is located at the bottom center of the dialog.

Before adding a quick point it is necessary to define it - point definition enables easy sorting points into logical groups:

- **Menu > More functions > Quick new point >  button**
- **Name of the definition** - optional, can be left empty
- **Storage** - either a *point folder* - can be used already existing or created a new one - or the quick point can be saved as a part of *track recording*

- **Icon & Name** - points can have its designated icon (otherwise they will inherit the folder icon).

The name can include special parameters (tap **+** button):

- *name {c}* - inserts a counter of points in folder
- *name {c1}* - inserts any increasing number
- *name {t}* - inserts a time stamp
- *name {text}* - enables inserting editable text before saving

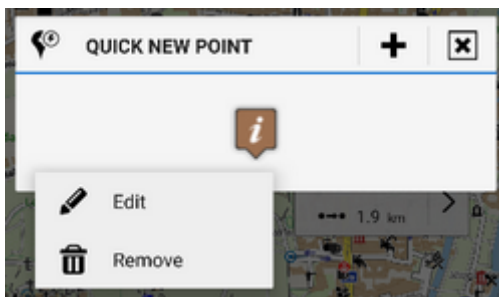

- **Description** - optional description of point

Adding a new quickpoint

- Center your position or shift the map screen center cross to the position where you want to place the point.
- Call Quick new point function - *Menu > More functions > Quick new point* and tap on a previously created point definition

It is very handy to place the Quick new point button into the **function panel >>**

Organizing definitions

It is possible to edit, move or delete quick point definitions:

- Long-tap the definition icon and select from popup menu of actions

Quick point function can be used also in navigation via BRouter offline routing engine, utilizing "via" and "nogo" points. [How to do it >>](#)
