

Update when both Locus Map Pro and Locus Map 4 are installed

Older Android versions enabled sharing of the main app directory between Locus Map Pro and Locus Map 4. This is no longer possible due to the [recent changes in the Android file system](#) - **each app can use only its own private folder.**

- Install and initialize the update of one of the Locuses
- Accept the offer to change its main directory: 
- **the app detects the other one** and warns of the possible loss of access to the data of the other app after the transfer 
- select one of the available **private folders** into which the data will be transferred
- after the transfer, restart the updated app
