

# Guidance Settings

---

## Points

### Guidance panel

Sets display of an [additional panel](#) with information about the point, its distance and direction etc. The panel is ON by default.

### Notification

Settings of [Guidance notifications >>](#)

## Tracks

### Next routepoint distance

Sets the distance at which Locus Map switches guidance to a next following routepoint.

### Notification of the next turn

Settings of type of alert of approaching direction change - beep, sound or TTS.

### "Out of route" notification

Notifies user of leaving the route. Tapping the item displays a dialog to set the alert distance, notification repetition and sound settings.

## Advanced settings

- **Strict route following** - depending on the route shape Locus Map automatically selects routepoints that are closer than the pre-set distance. This option switches this automation off and Locus guides along the track strictly from point to point - suitable e.g. for sailing.
- **Frequency of alerts** - defines number of alerts of direction changes on the track: low - medium - high
- **Notify on every routepoint** - starts continuous notification of accurate following the track. Applies only for tracks without navigation waypoints, e.g. when sailing, flying or sea-kayaking.

## Style on map

### Line/text color

Sets the color of guiding lines (arrows) and texts (distance, azimuth)

### Line size

Changes % size of guiding line from 10% to 1000%

### Value above guiding line

Defines the parameter displaying above the guiding line - distance, bearing, time to target or elevation

### Value below guiding line

Defines the parameter displaying below the guiding line - the same selection as above
