Guidance Settings

Points

Guidance panel

Sets display of an additional panel with information about the point, its distance and direction etc. The panel is ON by default.

Notification

Settings of Guidance notifications >>

Tracks

Next routepoint distance

Sets the distance at which Locus Map switches guidance to a next following routepoint.

Notification of the next turn

Settings of type of alert of approaching direction change - beep, sound or TTS.

"Out of route" notification

Notifies user of leaving the route. Tapping the item displays a dialog to set the alert distance, notification repetition and sound settings.

Advanced settings

- **Strict route following** - depending on the route shape Locus Map automatically selects routepoints that are closer than the pre-set distance. This option switches this automation off and Locus guides along the track strictly from point to point - suitable e.g. for sailing.
- **Frequency of alerts** - defines number of alerts of direction changes on the track: low - medium - high
- **Notify on every routepoint** - starts continuous notification of accurate following the track. Applies only for tracks without navigation waypoints, e.g. when sailing, flying or sea-kayaking.

Style on map

Line/text color

Sets the color of guiding lines (arrows) and texts (distance, azimuth)

Line size

Changes % size of guiding line from 10% to 1000%

Value above guiding line

Defines the parameter displaying above the guiding line - distance, bearing, time to target or elevation

Value below guiding line

Defines the parameter displaying below the guiding line - the same selection as above
