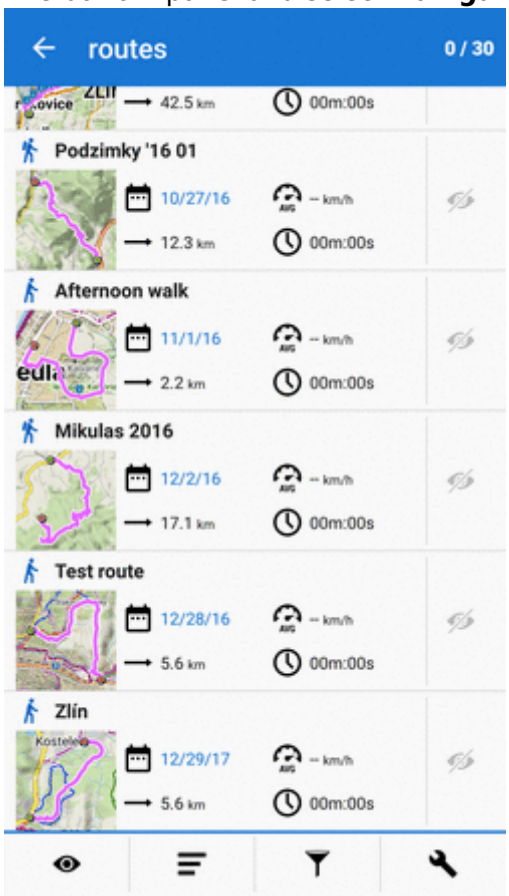
Navigation Along a Route

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route database.

1. Select a Route

From Track/route manager

1. **select a route** and tap it to display its detail screen >>
2. tap navigation button in the bottom panel and select **Navigation**

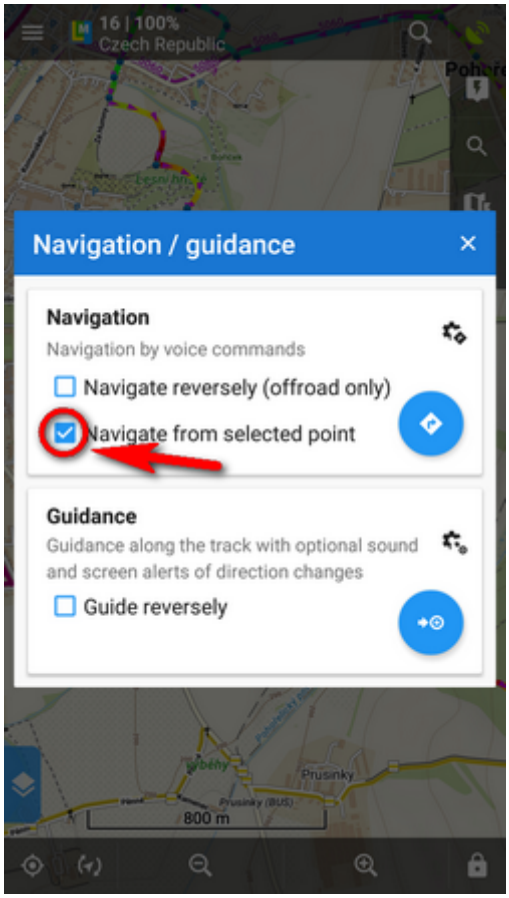


On map

1. **find** your route on map and **tap it**

2. tap ›› on the popup
3. select **Navigation/guidance** > **Navigation**

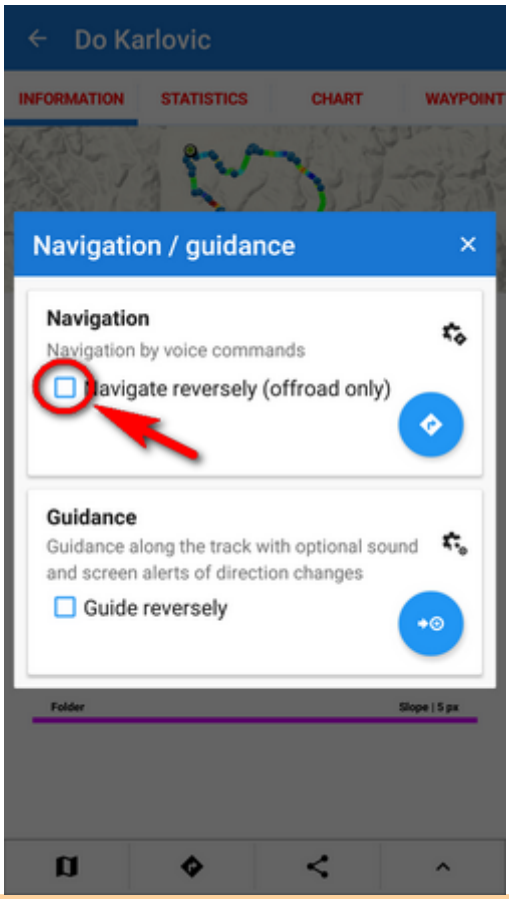
4. check **Navigate from selected point** if you want to be navigated from the place you tapped. Otherwise you'll be navigated from the nearest place on the route to your actual location



Locus Map **automatically generates navigation commands** along the route in places of the most remarkable direction changes.

Reverse direction

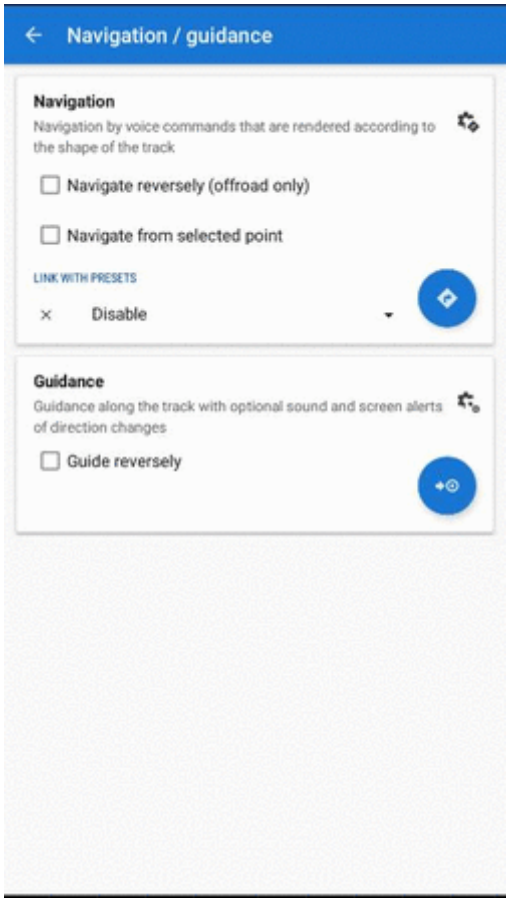
To be navigated in **reverse direction** of the route, check “Navigate reversely”:



Navigation commands on a reversed route may not reflect traffic situations accurately. **Recommended for offroad use only!**

Link with presets

If you need to **re-set Locus Map temporarily during the navigation** (e.g. shift the cursor, turn map rotation on, the screen permanently on, etc.), **select from your app presets** here:

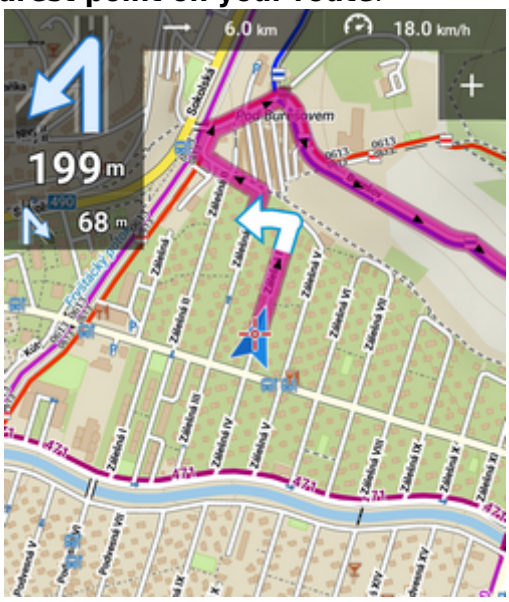


2. START Navigation

- **At the start of the route**

- **Away from the start of the route**
  In this case Locus **guides you to the nearest point on your route**.

- **Away from the start of the route - auto recalculation**
  If you have **auto-recalculation with route priority** set, the selected routing service **calculates route to the nearest point on your route**.



Auto-recalculation with point priority ignores your selected route and creates a new route to the nearest via point or directly to the finish.
