

Navigation Along a Route

Unlike in [Navigate to...](#) feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route database.

1. Select a Route

From Track/route manager

1. **select a route** and tap it to display its [detail screen >>](#)
2. tap  navigation button in the bottom panel and select **Navigation**

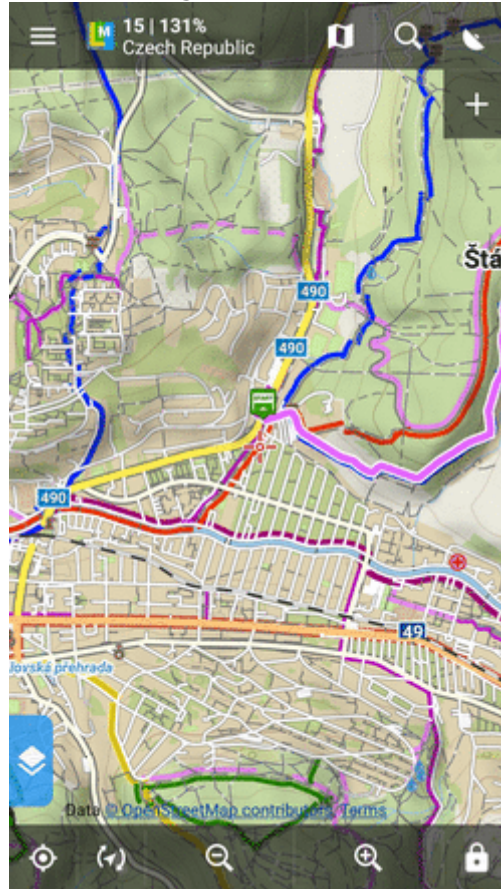

On map

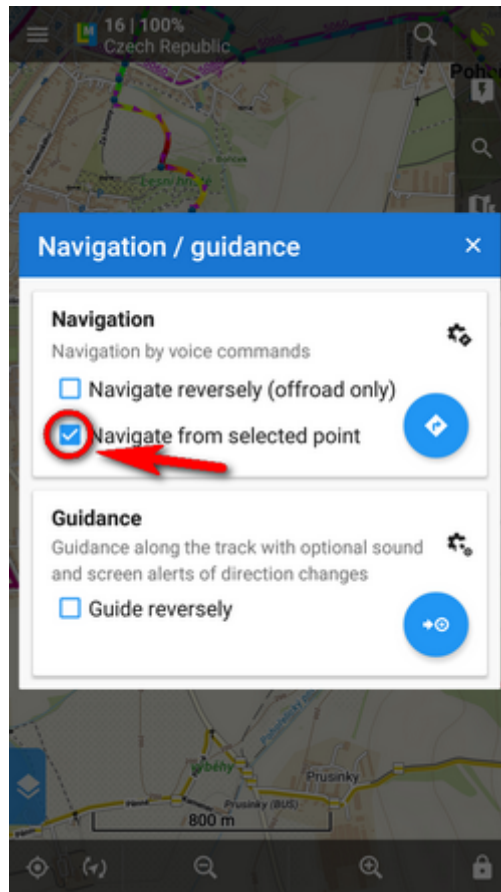

1. **find** your route on map and **tap it**

2. tap  on the popup

3. select  **Navigation/guidance > Navigation**

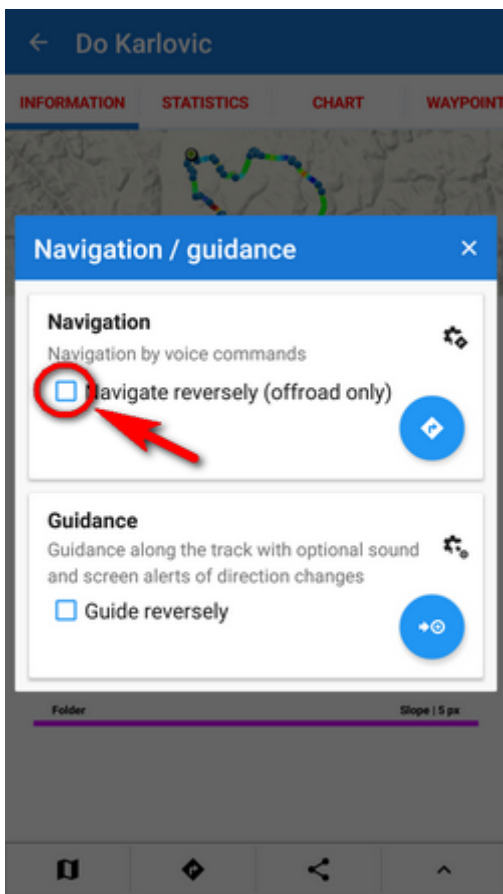

4. check **Navigate from selected point** if you want to be navigated from the place you tapped. Otherwise you'll be navigated from the nearest place on the route to your actual location

Locus Map **automatically generates navigation commands** along the route in places of the most remarkable direction changes.

Reverse direction

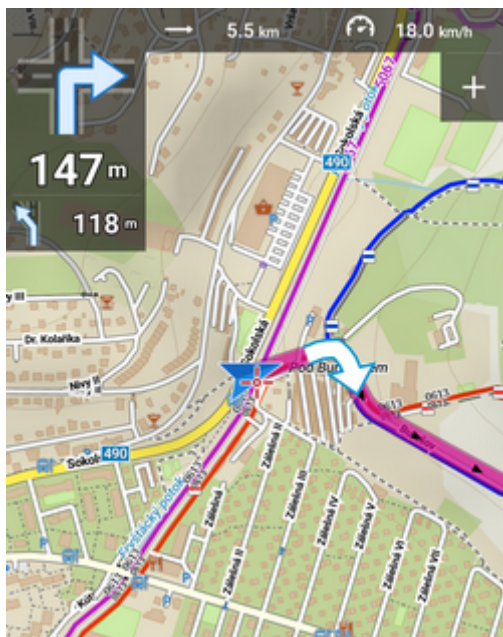

To be navigated in **reverse direction** of the route, check "Navigate reversely":

Navigation commands on a reversed route may not reflect traffic situation accurately. **Recommended for offroad use only!**

2. START Navigation

- At the start of the route

- **Away from the start of the route**

In this case Locus guides you to the nearest point on your route.

- **Away from the start of the route - auto recalculation**

If you have **auto-recalculation with route priority** set, the selected routing service calculates route to the start of your navigated route.

Auto-recalculation with point priority ignores your selected route and creates a new route to the nearest via point or directly to the finish.
