Navigation Along a Route

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route database.

1. Select a Route

From Track/route manager

1. select a route and tap it to display its detail screen >>

. tap onavigation button in the bottom panel and select Navigation

On map

1. find your route on map and tap it

2. tap on the popup

3. select • Navigation/guidance > Navigation

4. check **Navigate from selected point** if you want to be navigated from the place you tapped. Otherwise you'll be navigated from the nearest place on the route to your actual location

2025/10/23 01:24 3/6 Navigation Along a Route

Locus Map **automatically generates navigation commands** along the route in places of the most remarkable direction changes.

Reverse direction

To be navigated in **reverse direction** of the route, check "Navigate reversely":

Navigation commands on a reversed route may not reflect traffic situations accurately. **Recommended for offroad use only!**

Link with presets

If you need to **change app preset temporarily** during the navigation (e.g. cursor is shifted, map rotation is on, the screen is turned permanently on etc., here you can select TO BE CONTINUED...

2. START Navigation

At the start of the route

2025/10/23 01:24 5/6 Navigation Along a Route

• Away from the start of the route
In this case Locus guides you to the nearest point on your route.

Away from the start of the route - auto recalculation
 If you have auto-recalculation with route priority set, the selected routing service calculates route to the nearest point on your route.

Auto-recalculation with point priority ignores your selected route and creates a new route to the nearest via point or directly to the finish.
