

Function Panels Setting

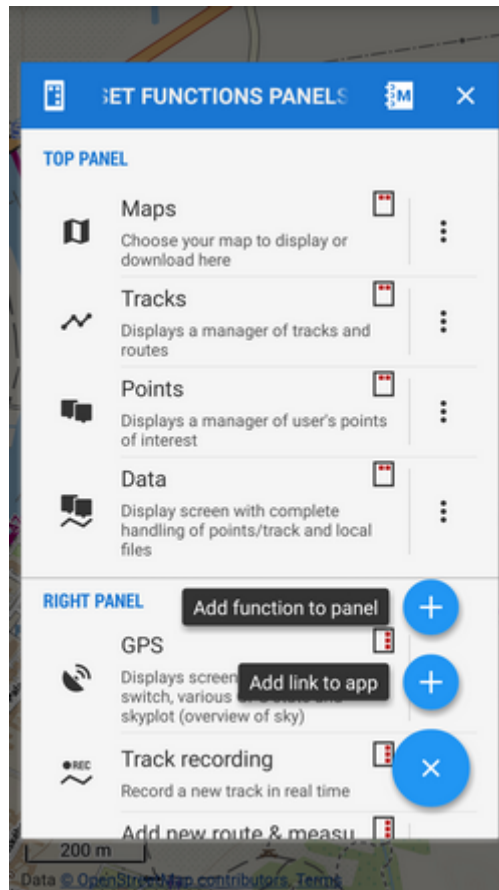

The top and right panels on the main screen contain buttons quickly switching your favorite functions on. It is possible to customize their position, number and features they turn on. There are several ways how to do this:

- tap the “+” button in the top right corner of the main screen

- go to *Menu > Settings > Maps > Panels&Buttons > Set functions panels*
- long-tap any of the buttons in the top or right panel and select **Modify panel**

Each way a settings window opens:

- **list of selected buttons in top and right panels** - the sign in the upper right corner of all items indicates position in  top or  right panel. Their **position can be changed by dragging their icons up or down across both panels**. You can move the buttons freely between top and right panels but the maximum number in the top panel is 5.
- **automatic button placing** - use this if you have a tablet or bigger screen or you rotate the screen often. It connects the two panels into a flexible one:
- to **change** a button function or **remove** a selected button, open  menu.
-  **adds new buttons:**
 - *Add function to panel* - adds a new button with selected feature to the function panel
 - *Add link to app* - adds a shortcut to any application installed on your device for quick launch (e.g. various [cooperating apps](#))

Both top and right panels can be hidden automatically on various conditions. This can be set in **Menu > Settings > Controlling > Panels&Buttons**
