2025/11/24 21:02 1/2 Map Manager

Map Manager

The Map Manager is Locus Map's main communication screen where you can select your map to **display** and **download** for

offline use. It is launched by icon in the main menu or in the right corner of the top panel. The Maps Manager screen includes a top bar with a download button, sort by

button and a window divided into four tabs:

- Online a list of all available online maps that can be displayed in Locus Map. By default it is sorted by map providers but you can easily change the sorting by the Sort by button menu - by
- Country, by Usage and by Smart choice (last used maps and most often used maps). To get the map you require, tap the group to unfold and select. As is mentioned in the Main Screen chapter, Locus Map selects the entry map automatically after the first run of your app. The selected map is online and is backlighted orange in the Manager. To change the displayed map, tap the selected one and confirm terms of its use. More about Online maps >><html>

- Personal a list of personally acquired offline maps. These can be obtained either by
 downloading online maps directly in the app or from external sources. Not all online maps in
 Locus Map can be downloaded, as it is mentioned in the Online Maps chapter. How to download
 and import external maps into Locus Map is referred to in more detail in Personal Maps >>
 <html>
<dr><dr><dr><dr><html>
<dr></dr>
- WMS list of installed WMS sources WMS (Web Map Service) is a standard protocol for serving

georeferenced map images over the **Internet** that are generated by map servers using data from a GIS database. **Locus Map** offers a variety of **Worldwide sources** that can be displayed in an overlay above your active map or a direct URL entry to activate any WMS source you wish. <a href="https://www.ntml.com/html.com

You can select which of map **tabs to display** in the Manager. It helps to keep the manager **clear** provided you do not use all of Locus Map's available sorts of maps. Tap the "Action button in the upper right corner, select **Visible tabs** and tick the desired ones. For further settings, tap the Settings option.

Quick Map Switch

A very useful feature of Maps Manager if you work with **various types of maps at once**. It offers your **last** used online maps, **nearest** personal and vector maps to your position at one tap. It can be added on your screen as another button by selecting **Menu > Settings > Map control&panels > Quick Map Switch**. There you define when to display it - never, when out of map or always. More about it in **Maps Settings >>**
