

Map Screen

Quick Map Switch

A very useful feature of the Maps Manager if you work with various types of maps at once. It offers your last used online maps, nearest personal and vector maps to your position at one tap to switch among them. This setting influences when the Switch appears in the upper left corner of the screen:

- **Never** – the Switch never appears
- **Out of map** – the Switch appears only if you are outside of the active map - allows quick map centering or a map change
- **Always** – the Switch is always visible on the screen
