# **WMS Maps**

#### **About**

**WMS** (Web Map Service) is a standard protocol for serving georeferenced map images over the Internet that are generated by map servers using data from GIS databases. These maps or map data layers are mostly provided by government organizations or education institutions (but also by many others). For more info, read this Wiki page. WMS maps are managed in the **WMS tab of Locus map manager**.

- This option is fully available only to Locus Map Pro users.
- Map manager WMS tab can be deactivated (invisible) to activate it, open
  Action menu, check Display WMS tab and restart Map manager

#### 1. Add WMS source

**Locus Map** offers a library of worldwide WMS sources where you can select or you can enter a direct URL to add any WMS source you wish to the app.

#### **Web Services library**

- open **WMS tab** in the Maps Manager
- tap in the lower right corner and select **Web Services library**:

• Locus Map offers WMS sources available in your area according to your GPS location:

https://docs.locusmap.eu/ Printed on 2025/07/05 17:08

2025/07/05 17:08 3/7 WMS Maps

• to specify your selection, use **fultext search**:

• tap the selected source - it is added to the WMS tab:

### **Add manually**

• select **Add manually** from the menu

https://docs.locusmap.eu/ Printed on 2025/07/05 17:08

2025/07/05 17:08 5/7 WMS Maps

- enter the WMS source address, name or password (if necessary) and press OK
- the source is added to the WMS tab

• if you think other Locus users would appreciate your link too, please, ask us to **add it to the public WMS library**:

We'll test the link and after its validation, it'll be added to the library.

#### Other Action menu items:

- **Details** information about the source provider, terms of use, contacts etc.
- Layers available layers in the source
- **Center map** aligns the map center with the cursor position in case your real location is outside the map
- **Re-initialize** reloads required information from WMS server and sets the map to default values
- **Disable** hides selected WMS layers in the map
- **Remove** deletes the WMS source from the tab

# 2. Display WMS map

- tap the selected WMS source in the map manager
- a list of available layers and an opacity slider appears:

• select layers to display, adjust their visibility above the active map and confirm. Be aware that not all layers may be visible in all areas and in all zoom levels.

## **WMS** controllers

After a WMS map is activated two new control buttons appear in the upper left corner:

- displays the opacity slider and active WMS layers list mentioned above check or uncheck layers to display or hide.
- displays a particular WMS feature information aim the screen center at a WMS

object on the map and tap the button. In case the object contains some additional information it displays in a pop-up window:

Current WMS support does not have any mechanism for tile caching. All data are stored only in your device's **temporary memory**.
