Miscellaneous

Global

Confirm on exit<html>
</html> Displays confirmation dialog on exiting Locus Map by the back button. Otherwise Locus Map stays active in background.

Locus Map as a service<html>
</html> Increases system priority of Locus Map and secures it against automatic system task killing.

Default directories<html>
</html> Allows customizing Locus Map default working directories, including root directory, maps directory etc. Useful mainly for users of Android 4.4+ who need to store Locus Map on SD card. More about this at our blog >>

Various

Enable periodic updates for Add-ons<html>
</html> Locus API for developers enables creating various Locus add-ons for many off-core functions. Most of them need to receive periodical information about map center location, GPS, recorded distance etc., for example Geocaching4Locus add-on that is very important for importing geocaches to Locus Map.

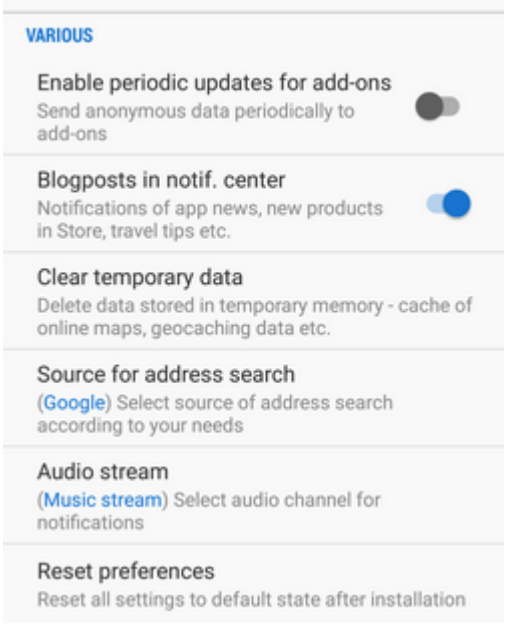

Clear temporary data<html>
</html> Deletes temporary storage folders:

- *Temporary files* - deletes cache directory
- *Cache of online maps* - deletes all cached online map tiles

- *Unneeded geocaching data* - deletes all cached data of geocache points that have been removed before
- *Unused attachments* - deletes all data linked to previously removed points

Warning: after performing this procedure all icons will have to be re-uploaded and new map initialization files will have to be created

Source of address search<html>
</html> Enables selecting from various address searching engines:

- *Google* - default search engine. Returns very precise data but is functional only on devices officially supported by Google and associated with a Google account.
- *MapQuest* - returns less precise data than Google in most cases but is functional on all devices
- *Bing* - another alternative to Google by Microsoft

Audio stream<html>
</html> Selects audio channel for notifications:

- *Music stream*
- *Notification stream*

Reset preferences<html>
</html> Resets all settings to default state after Locus Map installation.

Data import

Check duplicates<html>
</html> Enables checking duplicates of points or geocaches during POI import. Due to this check the import is a little bit slower.

Track color and transparency<html>
</html> Sets default color of all recorded, imported or manually created tracks.

Track width<html>
</html> Sets width of all recorded, imported and manually created tracks.

Data export

Overwrite data<html>
</html> Allows overwriting already exported data files (points or tracks).
