

# Miscellaneous

---

## Global

### Confirm on exit

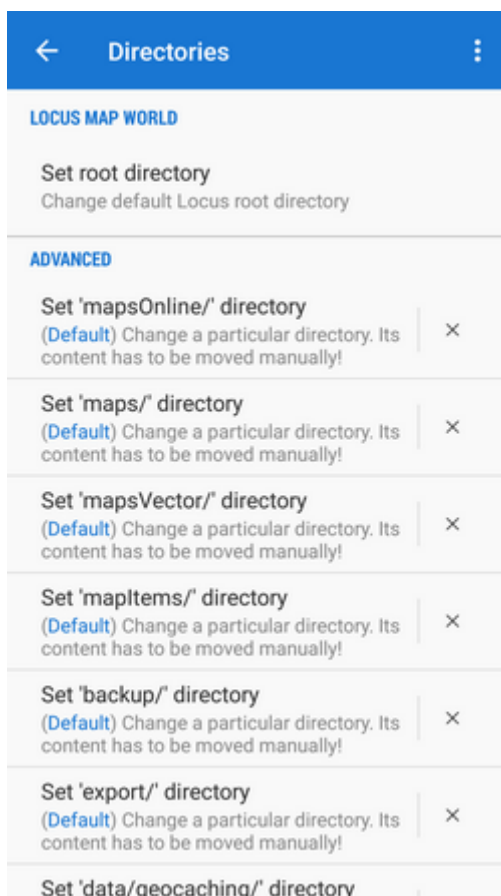

Displays confirmation dialog on exiting Locus Map by the back button (if left unchecked Locus Map can be closed by double-tap on the “back” button).

### Locus Map as a service

Increases system priority of Locus Map and secures it against automatic system task killing (but not always, [see >>](#)).

### Default directories

Allows customizing Locus Map default working directories, including root directory, maps directory etc.

Recommended settings for users of external SD cards is [HERE >>](#)

## Data import & export

### Check duplicates

Enables checking duplicates of points or geocaches during POI import. Due to this check the import is a little bit slower.

### Overwrite data

Allows overwriting already exported data files (points or tracks).

## Various

### Enable periodic updates for Add-ons

[Locus API](#) for developers enables creating various Locus add-ons for many off-core functions. Most of them need to receive periodical information about map center location, GPS, recorded distance etc., for example [Geocaching4Locus add-on](#) that is very important for importing geocaches to Locus Map.

### Blogposts in notif.center

Here you can switch on or off [on-screen notifications](#) of news from [Locus web site](#) (blogposts about various Locus tricks, new features, maps or traveling tips)

### Clear temporary data

Deletes temporary storage folders:

- *Temporary files* - deletes cache directory
- *Cache of online maps* - deletes all cached online map tiles
- *Unneeded geocaching data* - deletes all cached data of geocache points that have been removed before
- *Unused attachments* - deletes all data linked to previously removed points

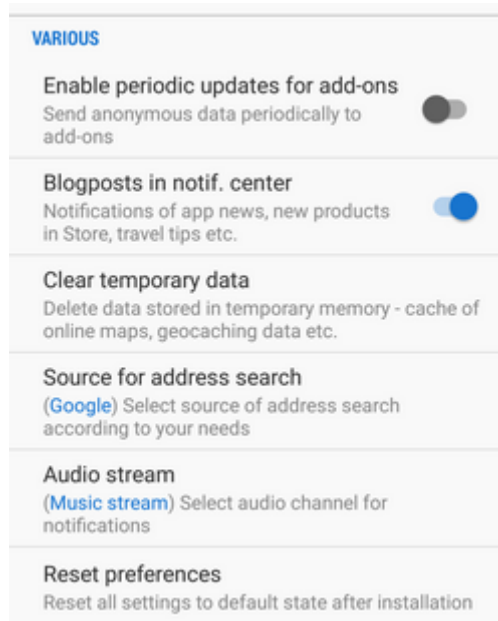

**Warning:** after performing this procedure all icons will have to be re-uploaded and new map initialization files will have to be created

### Source of address search

Enables selecting from various address searching engines:

- *Google* - default search engine. Returns very precise data but is functional only on devices officially supported by Google and associated with a Google account.
- *MapQuest* - returns less precise data than Google in most cases but is functional on all devices
- *Bing* - another alternative to Google by Microsoft

## Audio stream

Selects audio channel (and its volume setting) for notifications:

- *Music stream*
- *Notification stream*

## Reset preferences

Resets all settings to default state after Locus Map installation.
