

# Points & Tracks Settings

---

## Points

### Tap on point

Sets default action after tapping a point on the map:

- **Popup** - a small information label popping under the point, [more info here >>](#)
- **Screen** - whole screen window with all information about the point, [more info here >>](#)

### Point label content

Can be set in Locus Map Pro only

#### Basic settings

##### Labels on map:

- **Never** - label appears only after tapping the point
- **On hover** - label appears when the cursor is moved over the point
- **Always** - label permanently visible

**Elevation value** - elevation on the location of the point (based on [offline elevation data](#))

#### Context menu

Available switches:

- *Details, Navigate to, Guide to, Compass, Edit, Hide, Delete*

Geocaching switches:

- *Parent cache, Hint, Load all waypoints, Log your visit*

### Enable POI grouping

Displays a group symbol in higher map zooms on places with high density of selected points of interest for better map readability.

## New point default location

When creating a new user point on map, use one of following default methods of location:

- \*GPS fixed position - **creates point on actual GPS position of the user** \* Map screen center - **creates point at actual position of the cursor in the middle of the map screen** ===== **Check POI duplicates** ===== **Allows to prevent importing identical points of interest, including geocaches. You can select if to check all imported caches or only caches in selected folders.** ===== **Point icon size** ===== **Sets size of icons on the map from 50 to 300% of a normal size.** ===== **Tracks** ===== **Tap on track** ===== **Sets default action after tapping a track:** \* Popup - **a small information label popping under the track/route starting point, [more info here >>](#)** \* Screen - **whole screen with all information about the track/route, [more info here >>](#)** ===== **Track label content** ===== **Can be set in Locus Map Pro only** ===== **Basic settings** ===== **Labels on map - sets type of the label at a track starting point:** \* Do not show - **starting point is without label** \* Simple - **label shows only date/time of start** \* Complex - **label shows date/time of start, distance passed, total positive and negative elevation** Distance to GPS, recorded time\*\* - more optional values

## Context menu

Trackpoint (particular spot on track) switches:

- *trackpoint number, show on elevation chart*

Track switches:

- *track detail, analyzer (stats and charts), edit (name etc.), modify track, navigation/guidance, hide and delete*

## Track start/end icons

Select graphic symbols at start/stop of active tracks:

- *No symbol*
- *Dot*
- *Icon*

## Track line style

Default graphic settings of all tracks and routes across the whole app. [More info >>](#)

## Overwrite exported data

Allow to overwrite files that have been already exported.
