2025/11/07 08:06 1/4 Backup Manager

Backup Manager

We strongly recommend to back up your Locus data - **settings**, **points and tracks**. This tool enables to define **periodic automatic backups** and trigger **one-time backups**. Backup manager is also an essential tool for **transferring the application data from one device to another**.

Automatic Backup

... saves settings, points and tracks periodically to *Locus/backup/auto* directory and optionally to **Dropbox or Google Drive**. How to set it up:

- 1. **Enable** automatic backup
- 2. Set **repetition frequency**, **number** of stored backups and backup to **cloud** (optional but strongly recommended):

Backup to cloud

Automatically saves Locus settings, points and tracks to your selected directory at Dropbox or Google Drive. Make sure you have **applications of the services installed on your device**.

2025/11/07 08:06 3/4 Backup Manager

- First use of this feature requires login to your cloud service account
- Cloud backup is available only on devices with Android 5.0 and newer

Manual Backup

Saves a single backup file with Locus data to *Locus/backup/* directory (it can be changed in *settings* > *miscellaneous* > *default directories*). The file name is by default its **time stamp** but it can be changed.

- Backup all creates a backup of all settings, points and tracks in one package.
- Backup settings only creates the settings backup package. Useful if you use various sets of app properties.
- Restore shows content of /Locus/backup/ directory from which you can select a backup file
 to restore. In case of a file with all backup, you are prompted to select what content of the
 package you want to restore.

Backup sharing

After the backup file is created you can **share** it - **send it to Dropbox, email it, share it on social networks** etc. Just tap in the confirmation box:
