

Training Manager

Limited use in Locus Map Free - only one training scheme possible

Training manager enables you to define **workout audio coaching schemes** that can be triggered together with [track recording](#). You can define distance or time intervals in which Locus informs you about your distance, track time, average speed and heart rate.

How to set up a new training

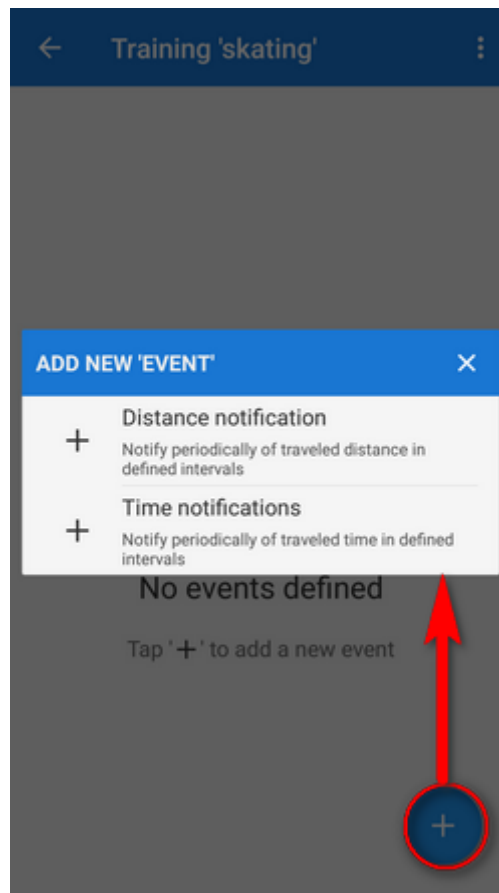

- go to *Settings > Track recording > Training manager*
- tap  and insert **name** of the training scheme. Change the **icon** if necessary.

- your training appears in the **training list**. Tap its  menu and select **Setup events**

- tap  again and select **distance** or **time** notification

- define the **distance or time interval** and add variables - **distance, track time, average speed and heart rate** (if proper sensor is connected). You can **combine both intervals** - distance and time and assign different variables to them and tailor the training scheme to your personal needs.

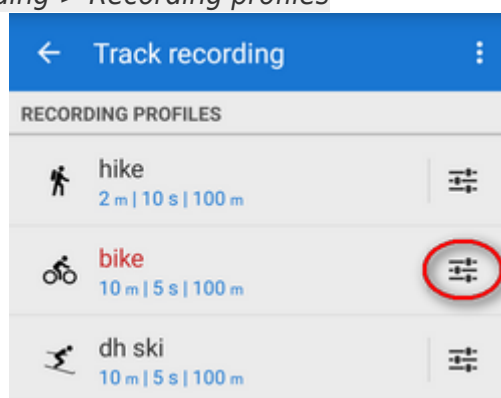

- go back to the training manager and **tap** the scheme you want to **activate** - it highlights red

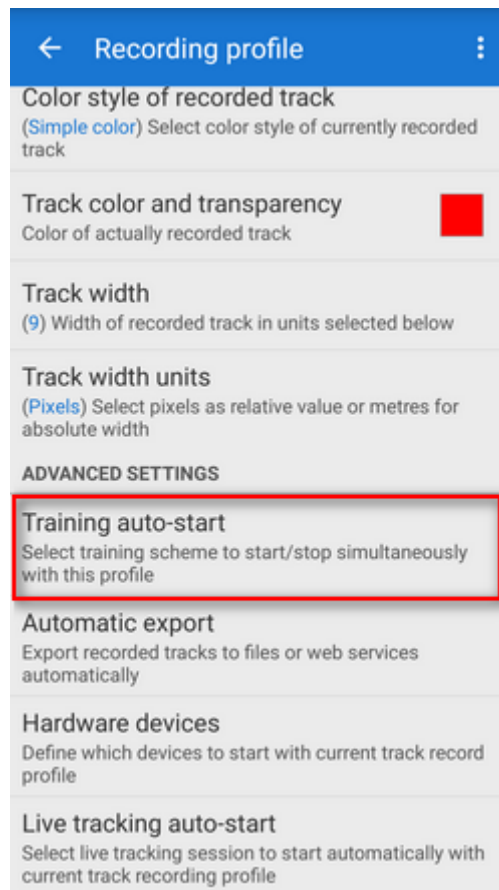

Automatic training start

It is possible to join a particular training scheme to a particular recording profile and start both at once.

- go to *Settings > Track recording > Recording profiles*

- select recording profile > profile settings menu  > Training auto-start

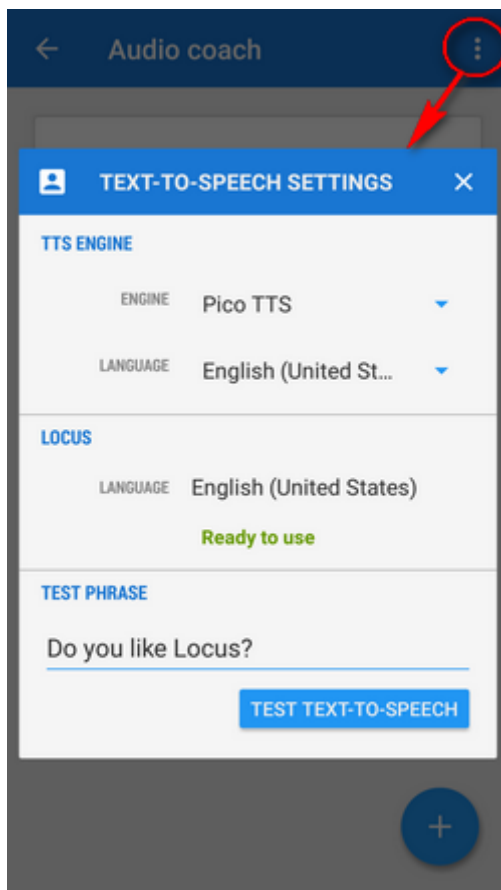

- select training scheme from the box

- your selected training scheme name and icon appears in the settings and the auto-start is set

Sound settings

Training manager uses default TTS (text-to-speech) engine of your device. If you need to change language or TTS engine, you can set it up directly from the training manager topbar menu  :
