

Audio coach

(ex "training manager")

Limited use in Locus Map Free - only one training possible

Audio coach comments your performance during a workout or a trip **with voice notifications** of your **actual or average speed, distance, pace, elevation, heart rate and many other parameters.**

It works with **training** schemes that are defined by the user and triggered together with **track recording**. If you have a Locus Pro version, you can define training schemes for any type of your sports activity.

How to set up a new training

- go to *Settings > Track recording > Audio coach*
- tap  and insert **name** of the training scheme. Change the **icon** if necessary.

- your training appears in the **training list**. Tap its  menu and select **Setup events**

- tap  again and select **distance** or **time** notification

- define the **distance or time interval** of notifications and add variables - **distance, track time, pace, average speed, elevation and heart rate** (if proper sensor is connected). All

variables are available also in interval (lap) versions. You can **combine both types of intervals** - distance and time and assign different variables to them and tailor the training scheme to your personal needs.

How to start Audio coach

Audio coach independent on recording profile

- go to *Settings > Track recording > Audio coach* and **tap the training you want to activate** - it highlights <html>red</html>

You can choose any track recording profile, the Audio coach will comment any of them with the same training scheme.

Automatic Audio coach start

It is possible to join a particular training scheme to a particular recording profile and start both at once without further setting.

- side-slide track recording panel contains an option to select Audio coach training scheme

before start of the recording:

- select recording profile, select training and press START. The training will stay assigned to your selected recording profile for future use.

You can assign the training scheme to a recording profile also in the Settings section:

- go to *Settings > Track recording > Recording profiles*

- select *recording profile > profile settings menu*  > *Training auto-start*

- select training scheme from the box

- your selected training scheme name and icon appears in the settings and the auto-start is set

Sound settings

Training manager uses default TTS (text-to-speech) engine of your device. If you need to change

language or TTS engine, you can set it up directly from the training manager topbar menu 

More about [text-to-speech settings in Locus >>](#)
