

Audio coach

(ex “training manager”)

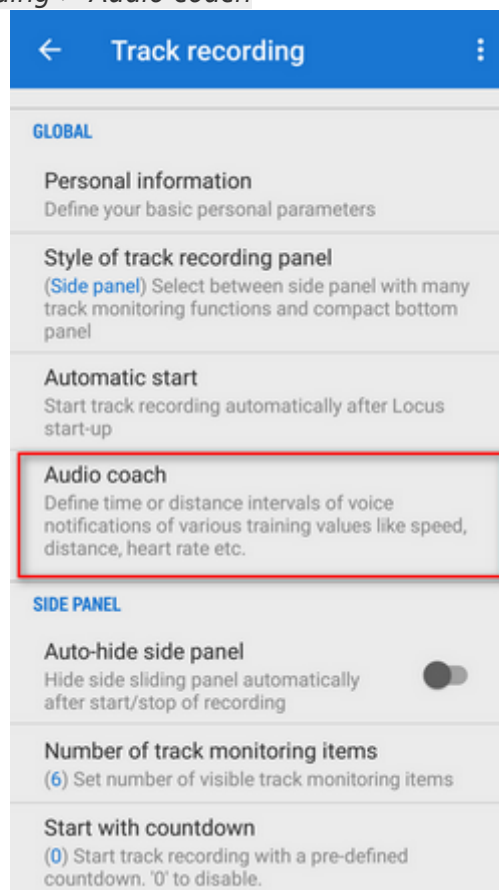

Limited use in Locus Map Free - only one training possible

Audio coach comments your performance during a workout or a trip **with voice notifications** of your **actual or average speed, distance, pace, elevation, heart rate** and many other parameters.

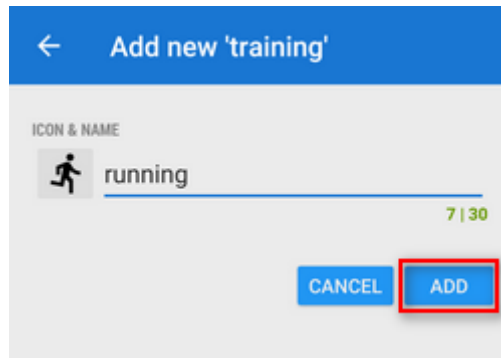

It works with **training** schemes that are defined by the user and triggered together with [track recording](#). If you have a Locus Pro version, you can define training schemes for any type of your sports activity.

How to set up a new training

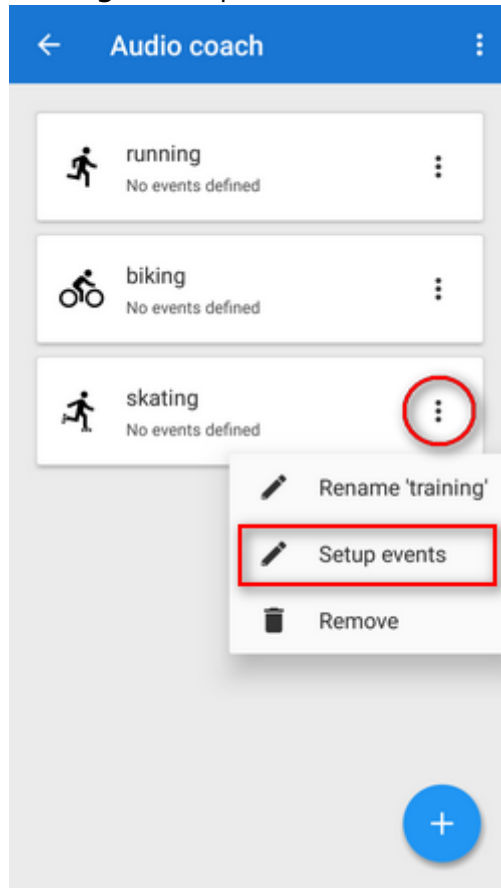

- go to *Settings > Track recording > Audio coach*

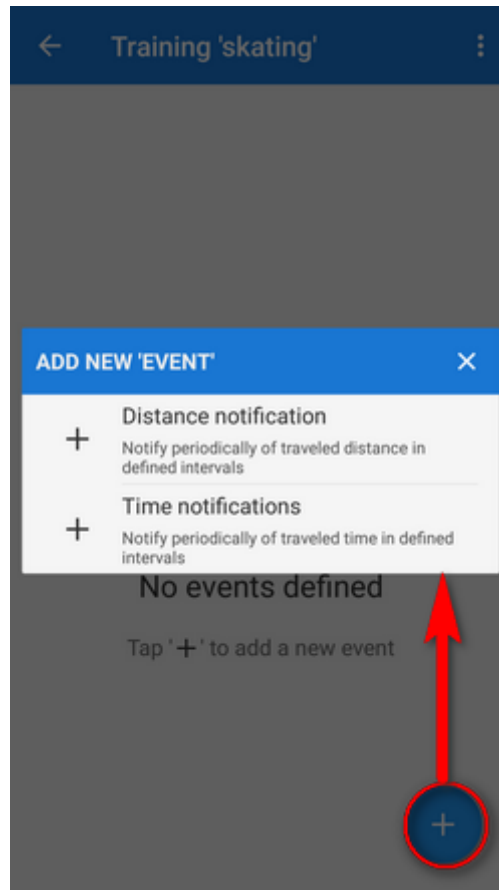

- tap  and insert **name** of the training scheme. Change the **icon** if necessary.

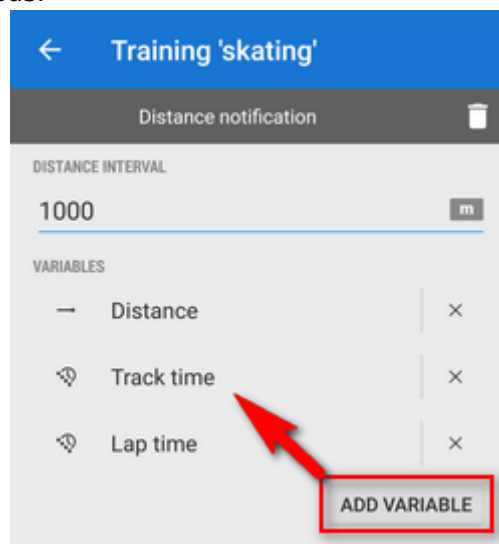

- your training appears in the **training list**. Tap its  menu and select **Setup events**

- tap  again and select **distance** or **time** notification

- define the **distance or time interval** of notifications and add variables - **distance, track time, pace, average speed, elevation and heart rate** (if proper sensor is connected). All variables are available also in interval (lap) versions. You can **combine both types of intervals** - distance and time and assign different variables to them and tailor the training scheme to your personal needs.

How to start Audio coach

Audio coach independent on recording profile

- go to *Settings* > *Track recording* > *Audio coach* and **tap the training you want to activate** - it highlights red

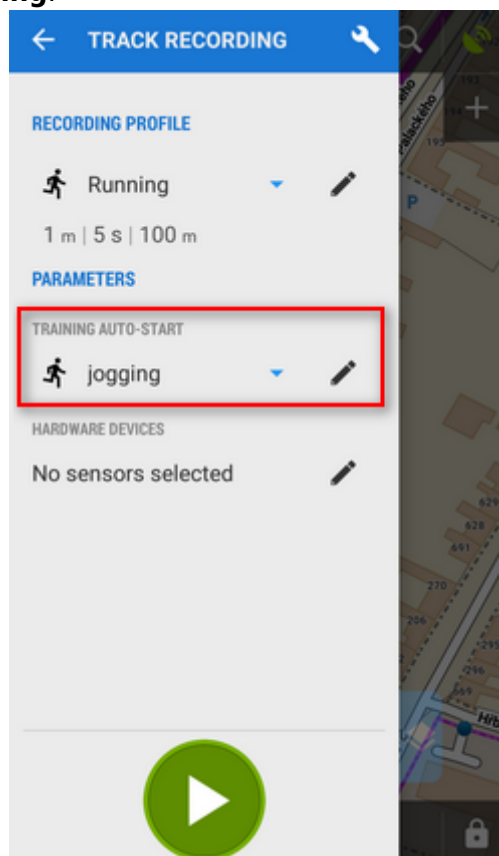

You can choose any track recording profile, the Audio coach will comment any of them with the same training scheme.

Automatic Audio coach start

It is possible to join a particular training scheme to a particular recording profile and start both at once without further setting.

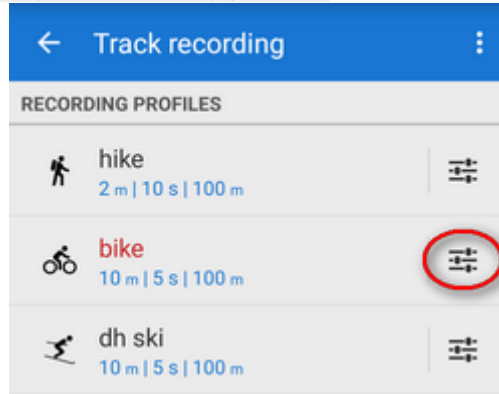

- side-slide track recording panel contains an option to select Audio coach training scheme **before start of the recording:**

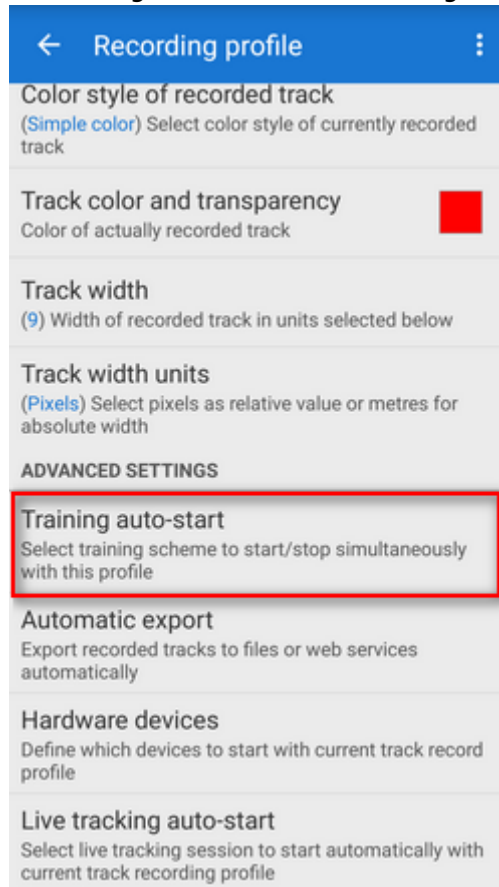

- select recording profile, select training and press START. The training will stay assigned to your selected recording profile for future use.

You can assign the training scheme to a recording profile also in the Settings section:

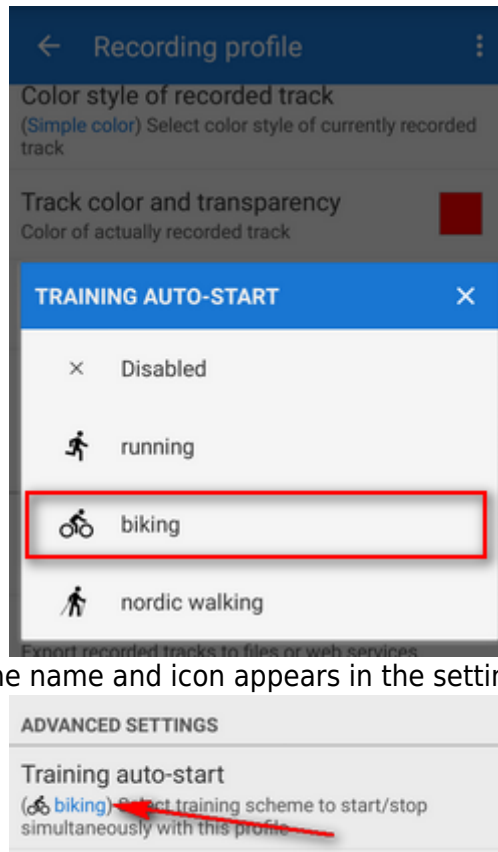

- go to *Settings > Track recording > Recording profiles*

- select *recording profile > profile settings menu*  *> Training auto-start*

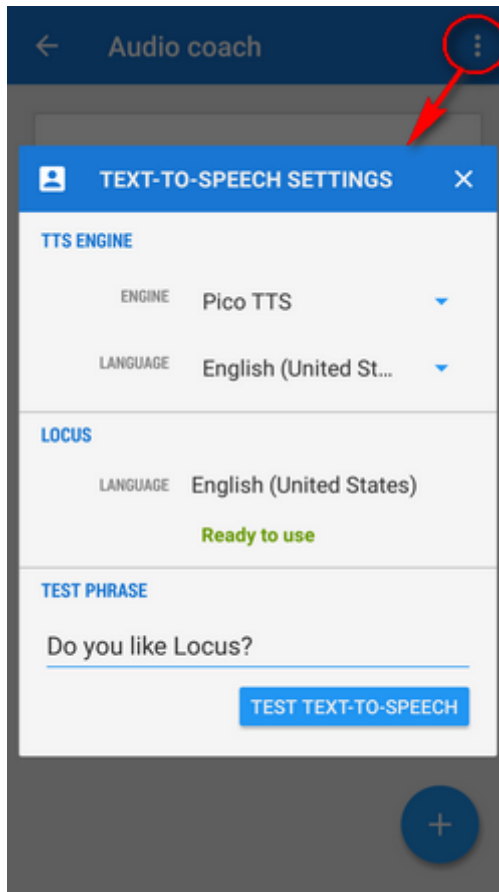

- select training scheme from the box

- your selected training scheme name and icon appears in the settings and the auto-start is set

Sound settings

Training manager uses default TTS (text-to-speech) engine of your device. If you need to change language or TTS engine, you can set it up directly from the training manager topbar menu  :

More about [text-to-speech settings in Locus >>](#)
