

# Audio coach

(ex "training manager")

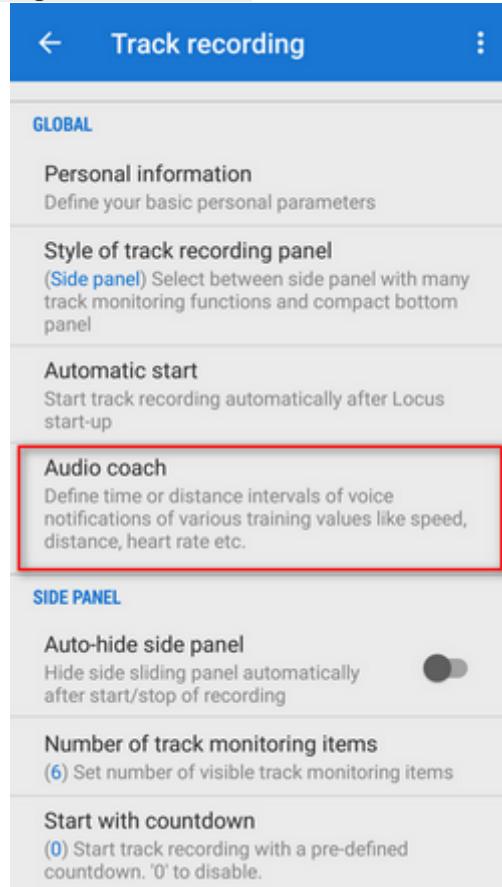

Limited use in Locus Map Free - only one training possible

**Audio coach comments your performance** during a workout or a trip **with voice notifications** of your **actual or average speed, distance, pace, elevation, heart rate** and many other parameters.

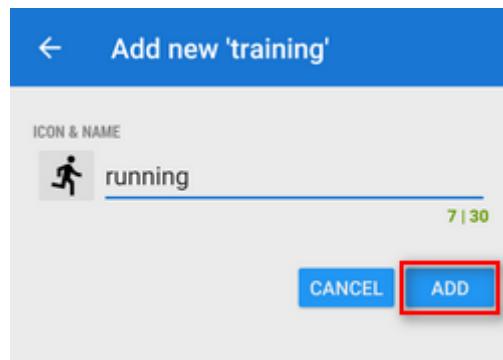

It works with **training** schemes that are defined by the user and triggered together with **track recording**. If you have a Locus Pro version, you can define training schemes for any type of your sports activity.

## How to set up a new training

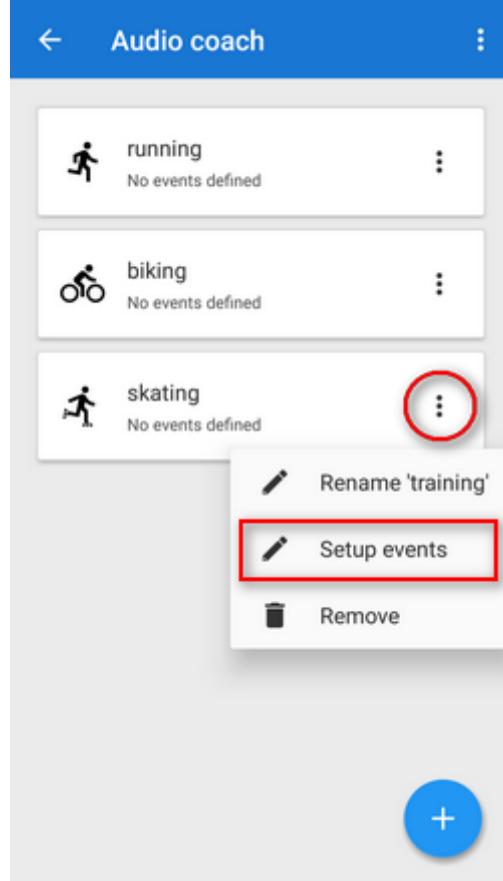

- go to *Settings > Track recording > Audio coach*

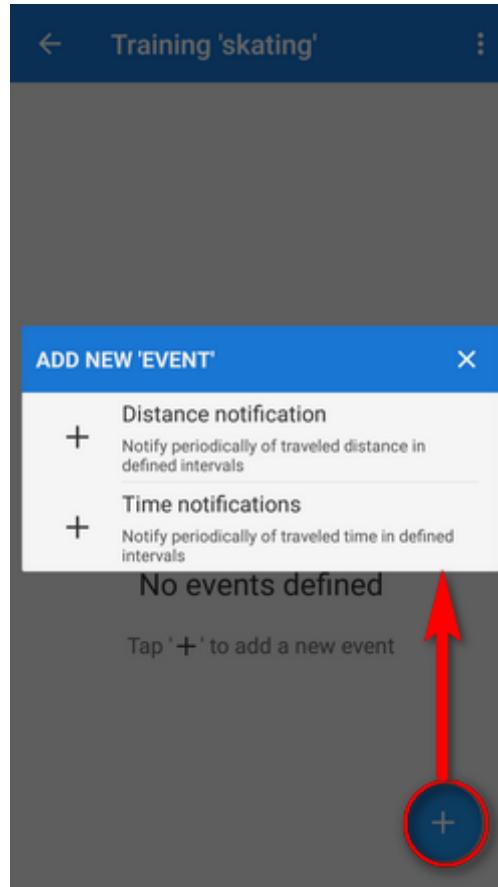

- tap  and insert **name** of the training scheme. Change the **icon** if necessary.

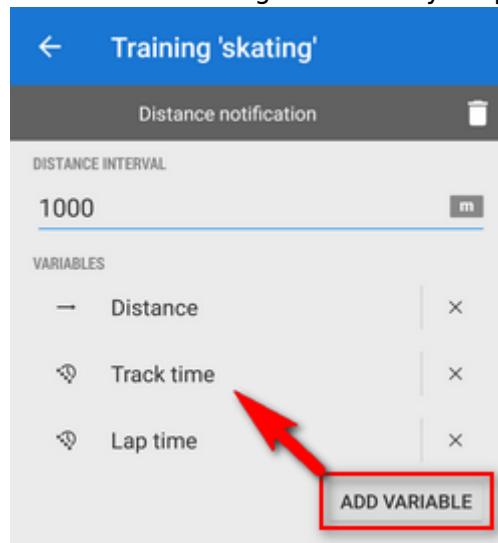

- your training appears in the **training list**. Tap its menu and select **Setup events**

- tap again and select **distance** or **time** notification

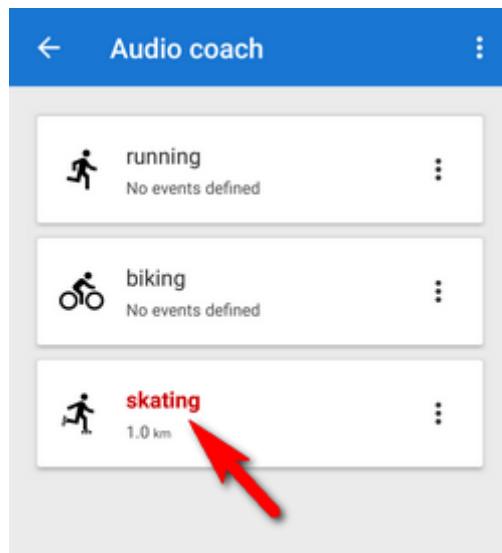

- define the **distance or time interval** of notifications and add variables - **distance, track time, pace, average speed, elevation, heart rate, cadence** (if proper sensor is connected), **battery % and energy consumption**. All variables are available also in interval (lap) versions. You can **combine both types of intervals** - distance and time and assign different variables to them and tailor the training scheme to your personal needs.

## How to start Audio coach

### Audio coach independent on recording profile

- go to *Settings > Track recording > Audio coach* and **tap the training you want to activate** - it highlights <html><font color="red">red</font></html>

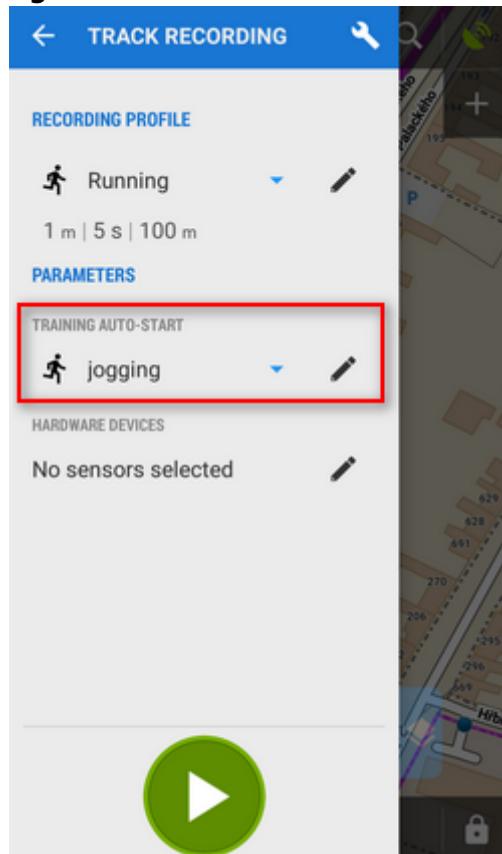

You can choose any track recording profile, the Audio coach will comment any of them with the same training scheme.

## Automatic Audio coach start

It is possible to join a particular training scheme to a particular recording profile and start both at once without further setting.

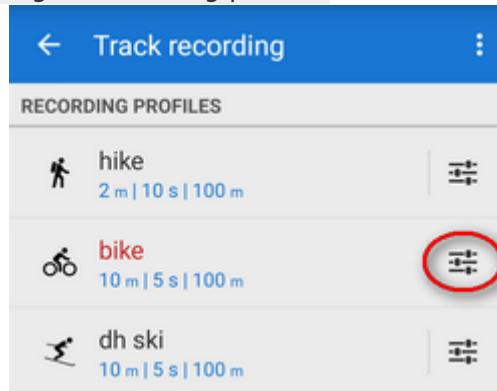

- side-slide track recording panel contains an option to select Audio coach training scheme **before start of the recording**:

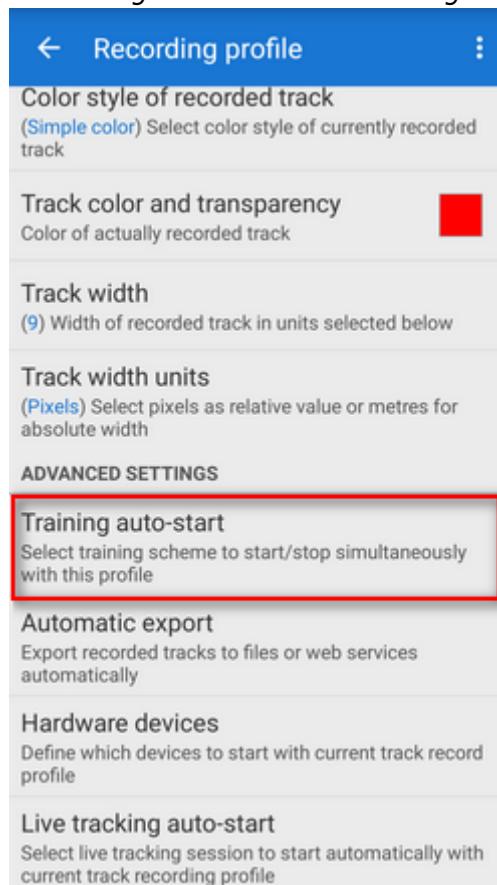

- select recording profile, select training and press START. The training will stay assigned to your selected recording profile for future use.

You can assign the training scheme to a recording profile also in the Settings section:

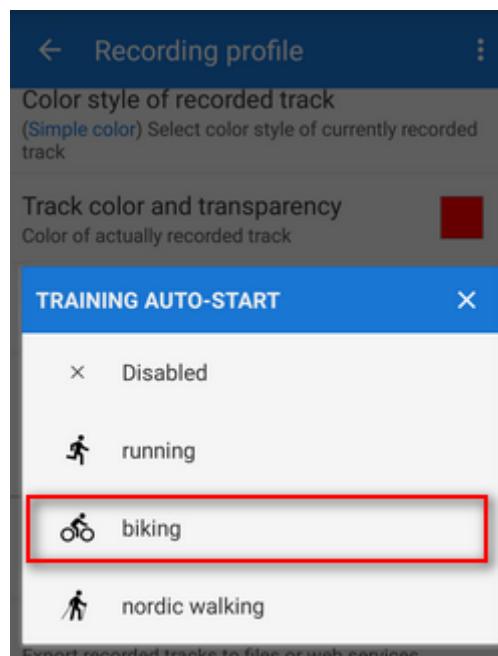

- go to *Settings > Track recording > Recording profiles*

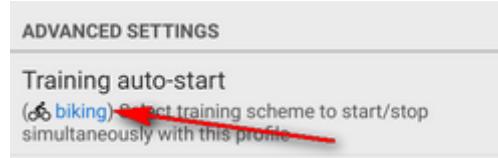

- select *recording profile > profile settings menu*  > *Training auto-start*

- select training scheme from the box

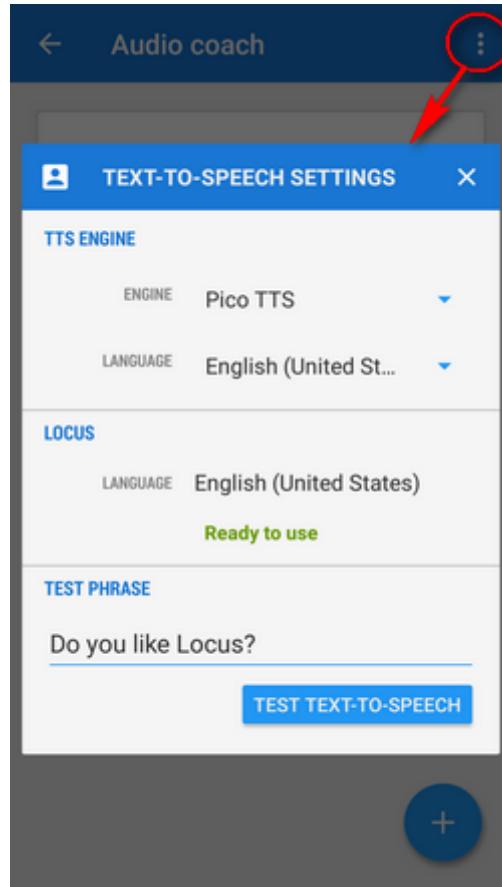

- your selected training scheme name and icon appears in the settings and the auto-start is set

## Sound settings

Training manager uses default TTS (text-to-speech) engine of your device. If you need to change language or TTS engine, you can set it up directly from the training manager topbar menu :

More about [text-to-speech settings in Locus >>](#)
