

## **Track Recording**

## **About**

Recording tracks in Locus Map is one of the core functions. Technically it is continuous saving of a chain of trackpoints - places that are marked by unique GPS coordinates - which are sort of breadcrumbs that user leaves behind when moving. The density of trackpoints/breadcrumbs can be pre-defined in **recording profiles** and varies according to used activity - walk, run, biking or driving by car. The faster is the activity, the less dense are trackpoints and the longer is the supposed traveled distance.

Tracks recordings are saved, stored in folder, can be sorted, filtered or edited later as can be seen in **Track Management chapter** >>. The track can be turned into a route to **navigate** you or just **guide along** its line.

## Basic instructions of use

• turn GPS on - make sure your GPS is working and is fixed (the GPS icon is green)

- launch the **track recording panel** (4 options):
  - Menu > Track recording

15:30

> Track recording ∘ Tracks >

• set the track-recording button in the Function panel for quick launch - recommended!

Locus Map Pro: track recording widget

https://docs.locusmap.eu/ Printed on 2025/10/16 22:54

- tap Start button at the bottom track recording begins. Track recording activity is visible also in your system notification bar.
- tap Pause button to pause recording
- tap Add point to add a waypoint to the track long tap it to select the default type of point plain text, photo, audio, or video
- tap Stop to stop track recording
- enter **track name** or leave the time stamp select **folder** to save the track to or make a new one, set the track line **color and width** if you want to differ it from the default folder setting

and tap **Save**. If you want to discard the recording, choose delete from the menu above.

Locus Map Pro users can start track recording comfortably and quickly from the **track** recording widget
