<u>WMS</u>

WMS Maps

About

WMS (Web Map Service) is a standard protocol for serving georeferenced map images over the Internet that are generated by map servers using data from GIS databases. These maps or map data layers are mostly provided by government organizations or education institutions.

WMS can serve almost any type of map. Beginning with **topographic maps, historic maps, satellite, and aerial images, cycling routes, town plans**, ending with various data layers like **cadastral maps, weather services, environmental layers**, etc.

For more info, read this Wiki page. WMS maps are managed in the **WMS tab of Locus map manager**.

Map manager WMS tab can be deactivated (invisible) - to activate it, open
Action menu, check Display WMS tab and restart Map manager

1. Add WMS source

Locus Map offers a library of worldwide WMS sources where you can select or you can enter a direct URL to add any WMS source you wish to the app.

Web Services library

- open WMS tab in the Maps Manager
- tap 💆 in the lower right corner and select **Add from library**:

• Locus Map offers WMS sources available in your area according to your GPS location:

• to specify your selection, use **fultext search**:

• tap the selected source - it is added to the **WMS tab**:

Add manually

• tap again and then **Enter WMS link**:

+ Add manually		×
http://		×
ADVANCED		
Name		
Password		
	CANCEL	ок

- enter the WMS source address, name or password (if necessary) and press OK
- the source is added to the WMS tab
- if you think other Locus users would appreciate your link too, please, ask us to **add it to the public WMS library**:

ONLINE	OFFLINE	WMS
services.cuzk.cz		
WMS Katastralni ma	ару	C
	i	Details
	WMS	Layers
	<	Add to library
	÷	Center map
	Ð	Re-initialize
	8	Disable
		Remove

We'll test the link and after its validation, it'll be added to the library.

Other Action menu items:

- Details information about the source provider, terms of use, contacts etc.
- Layers available layers in the source
- Center map aligns the map center with the cursor position in case your real location is outside the map
- Re-initialize reloads required information from WMS server and sets the map to default values
- Disable hides selected WMS layers in the map
- Remove deletes the WMS source from the tab

2. Display WMS map

- tap the selected WMS source in the map manager
- a list of available layers and an opacity slider appears:

WMS LAYERS		a. 🔊
SETTINGS		图 +
VISIBILITY		
Opaque	•	H
CRS		
EPSG:3857	•	
WMS LAYERS		
Cesky urad zamemericky		
→ Katastr nemovitosti		
$\rightarrow \rightarrow$ Analogove mapy		1.5
$\rightarrow \rightarrow$ Orientacni mapa par		The state
$\rightarrow \rightarrow$ vrstva DKM		
\rightarrow \rightarrow \rightarrow Parcelni cisla		
	-	1 X MILLAN

- select layers to display, adjust their visibility above the active map and confirm.
 - WMS map is displayed **only as an overlay above the currently active non-WMS map** (online or offline) - not as a single map
 - not all WMS layers may be visible in all areas and in all zoom levels.

WMS controllers

After a WMS map is activated two new control buttons appear in the upper left corner:

- **WMS** displays the **opacity slider** and **active WMS layers list** mentioned above check or uncheck layers to display or hide.
- We displays a **particular WMS feature information** aim the screen center at a WMS object on the map and tap the button. In case the object contains some additional information it displays in a pop-up window:

Current WMS support does not have any mechanism for tile caching. All data are stored only in your device's **temporary memory**.
