

Adding New Points

User points of interest can be added to map several ways - by **creating new points** from scratch, by **creating new points with some predefined parameters** or by **importing** them from outside of Locus.

Default position

New points are automatically created on your **actual GPS position**. There is an option to create new points on **position of the map cursor** but you need to set it up in **points settings >>**.

Creating a new point

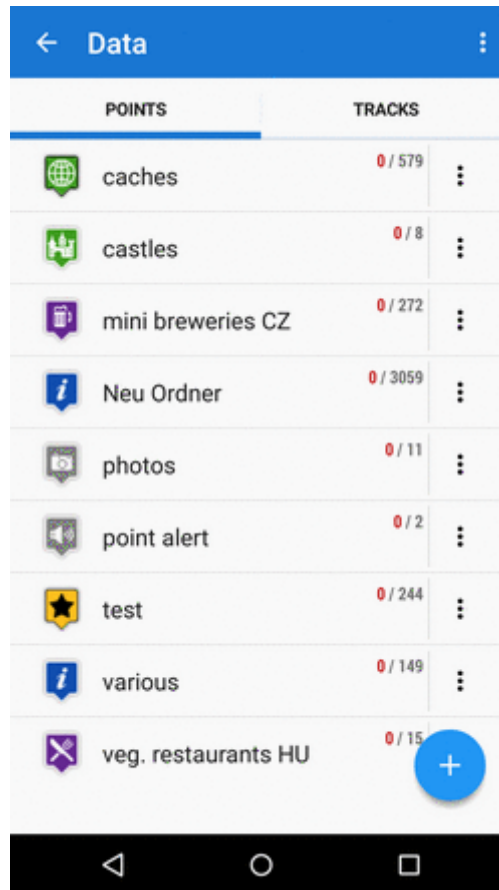

- tap **Main menu > Points >**  **>**  **New point:**

- adds a new point on map, all its other parameters are put in manually

... with a photograph

- tap **Main menu** > **Points** >  >  **Photo-point:**

- launches the phone camera, after taking a photo the point is created and the photo is attached

... in a particular folder

- tap **Main menu > Points > any folder > ** :

- creates a new point and stores it in the selected folder, all its other parameters are put in manually

... from an address

- Map screen > long tap on a selected place > tap the popup label (if there is any, see [map screen settings](#)) >  :

- adds a new point at the selected place. The address and coordinates automatically fill in the point detail dialog

... from a LoMap POI

- Map screen with LoMaps > tap a **dynamic point of interest** > tap its label to open the detail >  :

- copies all attributes of the map POI (name, short description, altitude, coordinates etc.) into a new point detail dialog

New points via Locus functions

... from search result

- Main menu/main screen topbar > **Search** > tap a search result item on map > tap its label to open the detail >  :

- fills all attributes of the search result in the point detail dialog.

... during track recording

- Main menu > **Track recording** > Start > Add point:

- adds waypoints on the recorded track:

- *Add new point* - adds a standard point on the track
- *Add point (photo)* - takes a photo and makes a point with a photo attachment
- *Add point (audio)* - records an audio and makes a point with an audio attachment
- *Add point (video)* - shoots a video and makes a point with a video attachment

Points created this way are “waypoints” existing only within the recorded track. Some point-related operations can not be performed with them, e.g. displaying them individually or copying them.

How to fill the new point form

Basic info

- **Icon & Name** - default new point icon is **given by context**. E.g. when you create a new point in a specific folder, the point has icon of the folder.

It can be changed - just tap and choose from **selection of Locus and Garmin style**. If you leave it as it is, no specific icon will be associated with the point and it may be changed when the point folder icon changes. The name is by default a time stamp of creating the point and can be edited too. **Name is one of the main point identifiers so it is not possible to save a no name point.**

- **Folder** - last used folder is pre-filled. It can be changed or a new folder can be created:

- **Location** - actual (or last fixed) **GPS position** is pre-filled. It can be changed by directly

rewriting the coordinates or using  **Location selector >>**

- **Description** - optional socket for entering detailed information about the point
- **Altitude** - height of the point above the sea level. If it is empty Locus Map can obtain it from offline elevation files - tap **Get**.
- **Address** - the address of the point can be filled either manually or from online databases - tap **Get address**:

The screenshot shows the 'Edit' screen of the Locus Map application. At the top, there is a dark header with the word 'Edit' on the left, a checkmark icon, the word 'SAVE', and a three-dot menu icon on the right. Below the header, there are two tabs: 'BASIC INFO' (which is selected and highlighted with a blue underline) and 'ATTACHMENT'. The 'BASIC INFO' tab contains several sections. The 'ADDRESS' section has five input fields labeled 'STREET', 'CITY', 'REGION', 'COUNTRY', and 'POST CODE'. A 'GET ADDRESS' button is located to the right of the 'POST CODE' field. Below the 'ADDRESS' section is a 'LINKS' section with an 'ADD ANOTHER FIELD' button. At the bottom of the screen, there is a black navigation bar with three white icons: a back arrow, a circle, and a square.

- **Links** - if you want to add e-mail, phone or URL, tap **Add another field**:

The screenshot shows a mobile application interface for editing a point. At the top, there's a dark header with the word 'Edit' on the left, a checkmark icon, the word 'SAVE', and a three-dot menu icon on the right. Below the header are two tabs: 'BASIC INFO' (active, highlighted with a blue underline) and 'ATTACHMENT'. The 'BASIC INFO' tab contains several text input fields with blue underlines. The fields are labeled as follows: ADDRESS (with a blue header), STREET (filled with 'Halenkovice ev.137'), CITY (filled with 'Halenkovice'), REGION (filled with 'okres Zlín'), COUNTRY (filled with 'Czech Republic'), and POST CODE (filled with '76363'). To the right of the POST CODE field is a grey button labeled 'GET ADDRESS'. Below these fields is a section labeled 'LINKS' with a blue header, and a grey button labeled 'ADD ANOTHER FIELD' is positioned to the right. At the very bottom, there's a black navigation bar with three white icons: a back arrow, a circle, and a square.

Attachment

Contains files attached to the point - photos, videos, voice recordings, texts etc. To add any tap **+** and choose from the selection:
