Track Recording

About

Recording tracks in Locus Map is one of the core functions. Technically it is continuous saving of a chain of trackpoints - places that are marked by unique GPS coordinates - which are sort of breadcrumbs that user leaves behind when moving. The density of trackpoints/breadcrumbs can be pre-defined in **recording profiles** and varies according to used activity - walk, run, biking or driving by car. The faster is the activity, the less dense are trackpoints and the longer is the supposed traveled distance.

Tracks recordings are saved, stored in folder, can be sorted, filtered or edited later as can be seen in **Track Management chapter >>**. The track can be turned into a route to **navigate** you or just **guide along** its line.

Basic instructions of use

- turn GPS on make sure your GPS is working and is fixed (the GPS icon 🗐 is green)
- • center your map screen on **your current position**
- launch the **track recording panel** (4 options):
 - Menu > Track recording

• Tracks > + > +	Track recording			
	~	Data		
	POI	NTS TRACKS	ITEMS	
	ోం	bike	0/22	
	+	ADD NEW	×	
	****		l time	
	~	Add new route & m Draw a new route directly measure distance		
	FOLDE	RS		
	E2	Add new folder Add new folder		
	~	test	2/1 🚦	

• set the track-recording button in the Function panel for quick launch - recommended!

• track recording widget

- (1) select your track recording profile
- if you have pre-defined any training schemes, select in (2)
- if you have any external sensor (HRM, speed, cadence...) attached to your device, select in (3)

 tap Start button at the bottom - track recording begins. The recording-start panel changes into recording-control panel.

Track recording activity is visible also in your system notification bar.

- tap **Pause** button to pause recording
- tap Add point to add a waypoint to the track long tap it to select the default type of point - plain text, photo, audio, or video
- tap **U** Stop to stop track recording
