

Custom settings

Expert settings

Settings that are not essential for running of the app and overall user experience. Some of these settings were removed from the main settings because of weak usage, some were found redundant and some have purpose only for advanced Locus users.

Activation

- long press Locus **main menu button**
- a new item - **Expert settings** - appears in Locus Map settings

UI/UX

Open main menu by dragging

Turning this on enables you to open Locus main menu by swiping your device screen left edge to right.

Confirm on exit

Turn this on if you need confirmation of Locus termination after double tapping hardware **back** button.

Tracks

Fill color of chart with...

Custom settings of track/route chart line colors.

Tools

Scroll to zoom

Record sensors data

Tweaks

Map hardware acceleration

Allow login over Google Play Services

When switched off, only an e-mail login to Locus Store or Live Tracking is possible.

Development

Only for experienced users or programmers! Do not change these parameters if you do not know exactly what you are doing!

Draw map tile bounds

Re-use tiles after zoom

Map tile loading animation

Geocaching STAGING server

Fix Me!

Fix Me!

Configuration file

- Since version 2.3.2 Locus Map offers advanced configuration options through *config.cfg* file stored in **Locus Map root directory** in your phone **memory**
- This file is automatically created during Locus Map first start (if it does not exist from its previous installation). Data are loaded at start and stored back to file in the end, so even if this file allows changing some settings that are also changeable in the application, settings will not be lost.

As this method has become obsolete and is quite user unfriendly, settings included in this configuration file are going to be moved gradually to the **Expert settings** section above.

Examples of some parameters

guiding_path_map_symbol

This parameter allows to define very precisely the shape and size of the guiding line. Best is to explain it on the default parameter.

Basic values are: **-8.0|-2.0|7.0|0.0|-8.0|2.0**

Imagine squared paper. Each two numbers mean X and Y coordinates. So draw them. Result will be as in the picture below. The same way you may draw whatever symbol you want.

Examples of some settings

guiding_path_symbol

guiding_path_symbol=-20|0|-20|-10|0|-10|0|-20|20|0|0|20|0|10|-20|10

guiding_path_symbol=-11|0|-14|-5|5|0|-14|5

MAP ITEMS STYLES
