How to navigate offline?

Offline navigation is essential for any outdoor traveling. Bad or even no data signal in mountainous, rural or otherwise deserted areas makes online navigation useless.

Locus Map in default settings offers navigation with help of implemented online services. Firstly it is YOURS online navigation service followed by others like OSRM and MapQuest. If you want offline navigation, you have to install **cooperating routing app BRouter**, available at **Google Play Store** >>. Locus Map identifies it in the system and adds it automatically to the routing services portfolio.

BRouter setup

• after installation, launch BRouter

| Select Main Action |
|--------------------|
| Download Manager |
| BRouter App |

• select Download manager

zoom in and select the area you need for offline routing

 set BRouter as default navigation data source in Locus menu > settings > navigation > navigation data source

| ← Navigation | |
|--|---|
| GLOBAL | |
| Navigation data source (BRouter) Select data source for route | + |
| NAVIGATION DATA SOURCE | × |
| m MapQuest | |
| 🎉 Yours | |
| 🚸 OSRM | |
| BRouter | |
| GraphHopper | |
| Advanced settings Settings of other details | |
| STYLE ON MAP | |
| Color Set the color of lines and texts | |

• then start navigation as usual by **Wavigate to** function and **you will be navigated** offline.

BRouter remains set as default also for engine-routing-assisted drawing in Add a new route function

Advanced options

Although BRouter user interface looks quite simple, the app offers quite a lot of various settings, creating custom navigation profiles etc. A rich source of info and tips is this wiki-blog >>. BRouter provides also a web app, enabling route planning on a big PC screen and consequent export to GPX file and then to Locus Map.

An alternative method of using BRouter for route planning, utilizing its "*no go*" and "*via*" points is described in detail here >>

GraphHopper

An alternative to BRouter is routing software **GraphHopper**. An unofficial Locus GrapHopper add-on is still in development but is free to use. It is not available at Google Play yet – all necessary links and relevant information gather in this forum thread >>.
