

Augmented Reality Add-On

Use of this add-on is limited to one minute in Locus Map Free. It is fully functional in Locus Map Pro version.

About

- Add-on enables visualization of selected points on the device screen with camera view. Useful during town sightseeing tours, for geocaching or for simple guidance to any point.
- After installation it can be launched from `Menu > More > Augmented Reality`

Instructions of Use

- select the [points of interest to visualize](#). It is necessary to have the needed points **downloaded** in Locus Map.

The add-on displays [map-independent POI](#) only (not Locus Maps POI).

- start the add-on and watch your points hover on the camera screen on their real-world positions.
- tap any point to display its name. Tap again for details (augmented reality add-on is closed by it)
