

# **Guidance Settings**

# Points

# **Guidance panel**

Sets display of an additional panel with information about the point, its distance and direction etc. The panel is ON by default.

## Notification

Settings of Guidance notifications >>

# Tracks

#### Next routepoint distance

Sets the distance at which Locus Map switches guidance to a next following routepoint.

# Notification of the next turn

Settings of type of alert of approaching direction change - beep, sound or TTS.

#### "Out of route" notification

Notifies user of leaving the route. Tapping the item displays a dialog to set the alert distance, notification repetition and sound settings. **Settings are the same as for Navigation**.

# Advanced settings

- **Strict route following** depending on the route shape Locus Map automatically selects routepoints that are closer than the pre-set distance. This option switches this automation off and Locus guides along the track strictly from point to point suitable e.g. for sailing.
- Frequency of alerts defines number of alerts of direction changes on the track: low medium high
- **Notify on every routepoint** starts continuous notification of accurate following the track. Applies only for tracks without navigation waypoints, e.g. when sailing, flying or sea-kayaking.

# Style on map

## Line/text color

Sets the color of guiding lines (arrows) and texts (distance, azimuth)

#### Line size

Changes % size of guiding line from 10% to 1000%

# Value above guiding line

Defines the parameter displaying above the guiding line - distance, bearing, time to target or elevation

#### Value below guiding line

Defines the parameter displaying below the guiding line - the same selection as above
