

Navigation along a route

Fix Me! RECONSTRUCTION **Fix Me!**

Unlike in **Navigate to...** feature where the route is calculated from start to end by a routing service, **Navigation along a route navigates recorded tracks, imported or planned routes** stored in your own Locus track/route folders.

Instructions

- **select a route** from the Data manager and tap it for [details >>](#)
- tap navigation button in the bottom panel and select **Navigation**

- OR **tap a route** displayed on map > tap button on the label > select Navigation/guidance > **Navigation**

Locus Map automatically generates navigation commands along the route. If you need to be navigated in **reverse direction**, make a copy of the route and check both the

“Change track orientation” and “Generate commands” options in the copy dialog.

If you want to be navigated strictly along the selected route (e.g. on a bike), check “Strict route navigation” and un-check “Automatic recalculation” in the [navigation settings](#).
