

Quick WWW Bookmark

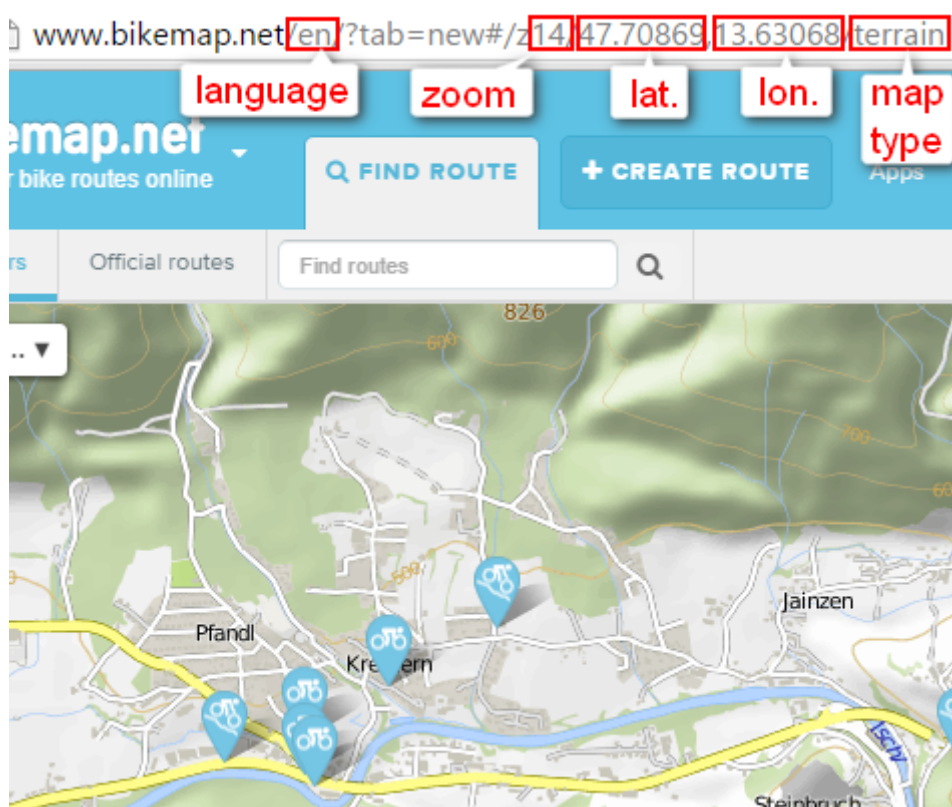

About

Feature enabling to bookmark a parameter URL of any map website that can transfer you to Locus Map defined location by a single button tap e.g. for downloading tips for trips. The function can be found in the **Menu > More** at the bottom.

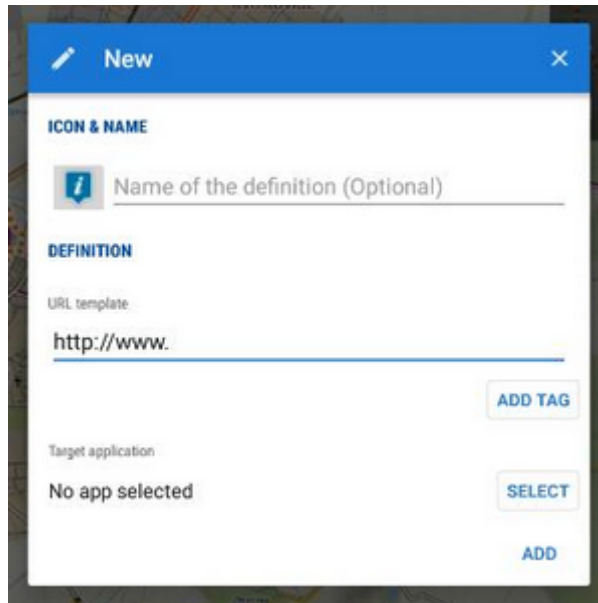

As there are many map websites or servers and each of them uses different structure of their parametrized URL, there is not a single universal instruction how to set up this function. For better understanding what this function is about, we will present a **demo setup** made on a well known track database **Bikemap.net**

Instructions

1. have a look at the structure of the website URL that leads to the map display. It consists of the main domain name **www.bikemap.net**, **language** parameter, **zoom** parameter, **latitude**, **longitude**, **map type** parameter and the rest:

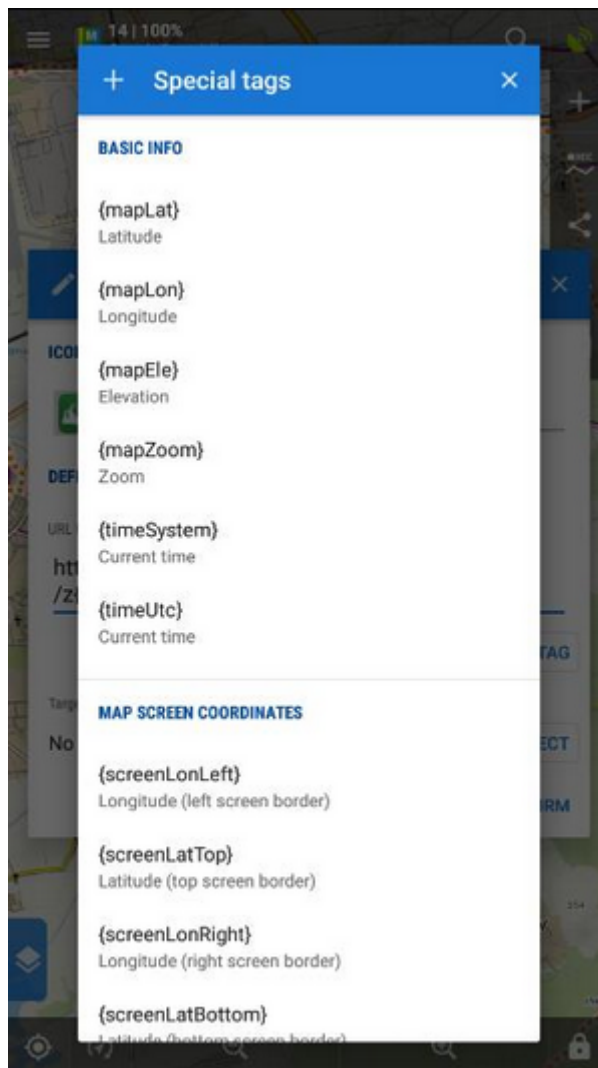

2. go to Locus Map > Menu > More > Quick WWW bookmark and tap **+** button to define a **new bookmark**

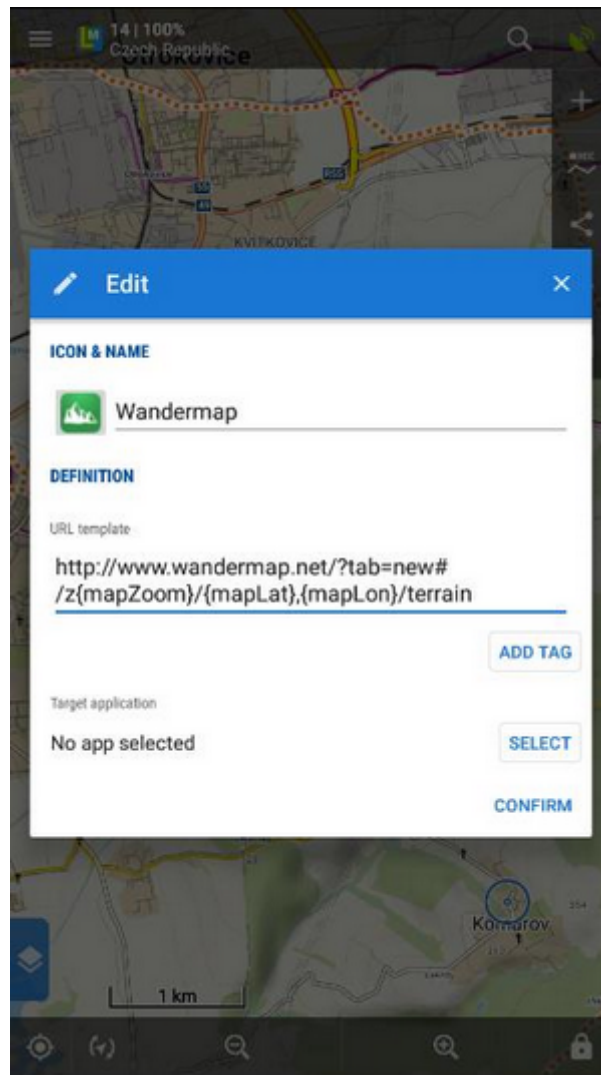

The screenshot shows the 'New' dialog box for creating a bookmark. It has a blue header with a pencil icon and the word 'New'. Below the header, there are three sections: 'ICON & NAME' with a placeholder for an icon and a text field for 'Name of the definition (Optional)'; 'DEFINITION' with a 'URL template' field containing 'http://www.' and an 'ADD TAG' button; and 'Target application' with 'No app selected' and 'SELECT' and 'ADD' buttons.

3. insert the name and compose the **URL template** according to the **website URL**, using **ADD TAG** button for the variables:

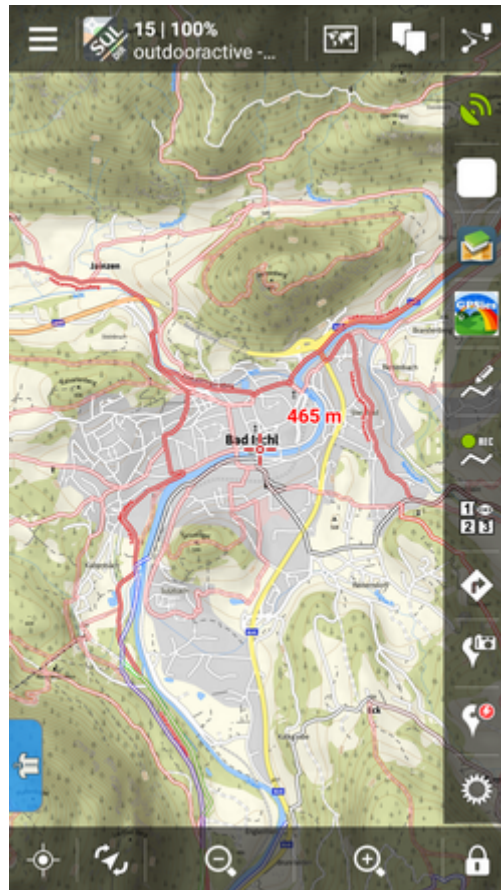

The screenshot shows the 'Special tags' dialog box, which is a list of variables that can be used in the URL template. The dialog has a blue header with a plus icon and the text 'Special tags'. It is divided into two sections: 'BASIC INFO' and 'MAP SCREEN COORDINATES'. The 'BASIC INFO' section includes variables like {mapLat}, {mapLon}, {mapEle}, {mapZoom}, {timeSystem}, and {timeUtc}. The 'MAP SCREEN COORDINATES' section includes variables like {screenLonLeft}, {screenLatTop}, {screenLonRight}, and {screenLatBottom}.

the final setup will be like this:

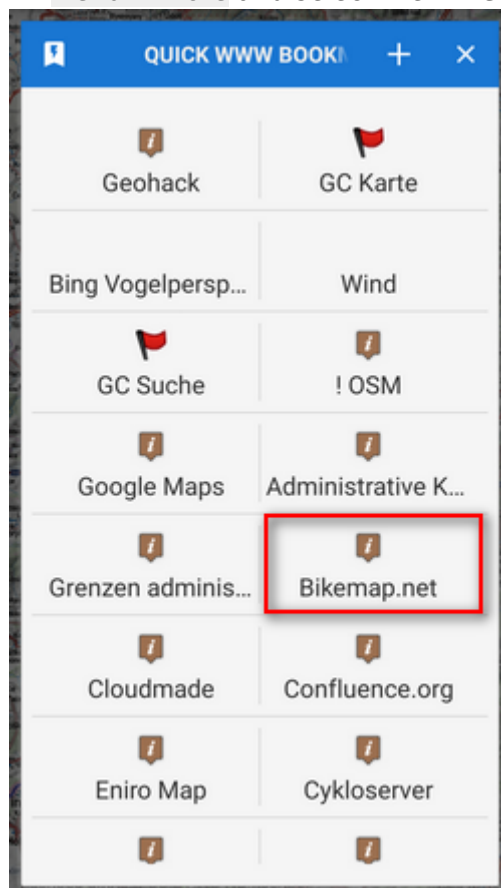

The URL syntax must be preserved or the feature will not work!

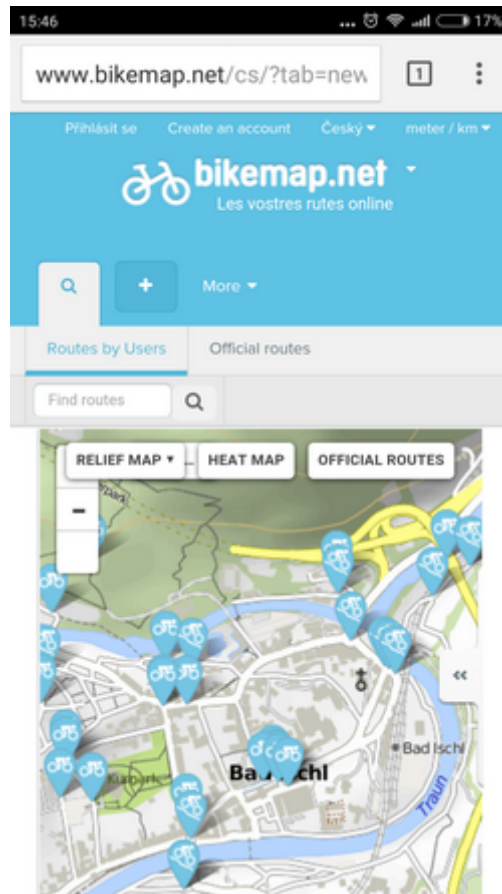

4. **Confirm**
5. adjust the map in Locus Map at your desired location

6. tap **Quick WWW Bookmark** in Menu > More and select the **Bikemap** bookmark

7. a web browser window opens with [Bikemap.net](https://bikemap.net) positioned at your location:
