Map control

Menu > Settings > Maps > Map control

MAP CONTROLS

Map control style

Select mode of basic map controlling - either *Locus Map* mode (double tap showing hidden menu...) or *Google Maps* mode - double tap = zoom in, two fingers tap = zoom out, three fingers tap = hidden menu etc.

Use hardware buttons

Volume controlling hardware buttons can be used to zoom the map.

Phones with hardware or Bluetooth keyboard can be also controlled by letters **C** - map centering, **D** - display, **G** - GPS, **arrow buttons** - map shift, **+/-** - zooming.

There is no need to take your gloves off on cold days!

Simple multi-touch

Check if you prefer to disable rotation and panning of the map when pinch-zooming.

MAP BEHAVIOR

Enable address display

If checked, long-tap any place on the map, Locus Map will try to provide postal or regional address of the place.

Shift map screen center

It moves the map screen center down by 1/4 of the screen. Functional only with the map rotation on. Useful especially for guiding.

Hold map screen center

If you shift the map out of your current position when browsing it, this function centers it back on current GPS location after 5 secs of inactivity.
