

# Backup Manager

- Menu > More functions > Backup Manager

The Backup Manager enables **one-time backup of Locus settings, points and tracks** or defines **periodic automatic backups**. Backups can be also **shared** to your favorite **cloud services** and used for **transferring the application data from one device to another**.

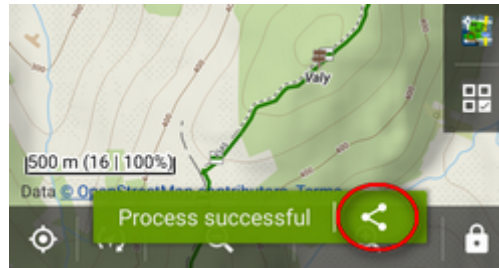

## Manual Backup

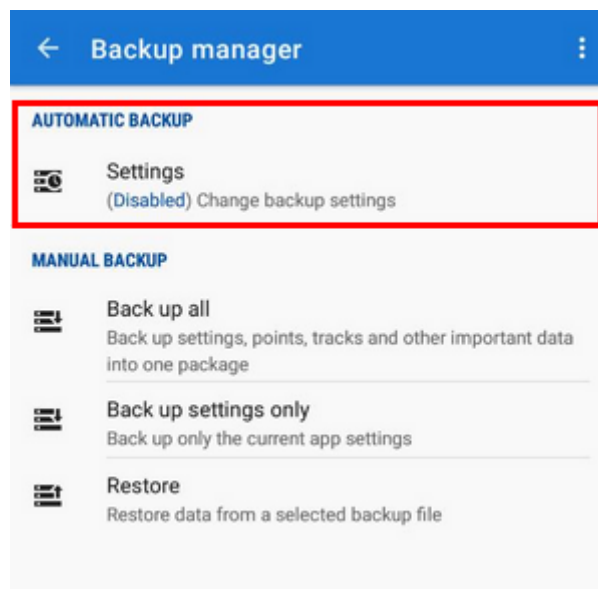

- **Backup all** - enables immediate **one-time backup of all settings, points and tracks** into one package. The **time stamp** is default as the package name but it is possible to change it. By default, the package is stored into *Locus/Backup* directory (it can be changed in *settings > miscellaneous > default directories*).
- **Backup settings only** - creates the settings backup package. Useful if you use various sets of app properties.
- **Restore** - shows content of */Locus/backup/* directory from which you can **select a backup file to restore**. In case of file with all backup you are prompted to select **what content of the package you want to restore**.

## Backup sharing

After the backup file is created you can **share** it - **send it to [Dropbox](#)**, **email it**, **share it on social networks** etc. Just tap  in the confirmation box:

## Automatic Backup

... saves settings, points and tracks periodically to *Locus/backup/auto* directory without user's interference. You can also set automatic backup to **Dropbox or Google Drive**.

1. **Enable** automatic backup
2. Set **date** of the next backup, **repetition frequency**, **number** of stored backups and backup to **cloud**:

The screenshot shows the 'Automatic backup' settings screen. At the top, there is a blue header with a back arrow, the title 'Automatic backup', and a menu icon. Below the header, there is a toggle switch labeled 'Enable' which is turned on. Underneath, there are two input fields: 'Repeat every 3 days' and 'Keep last 3 backup files'. A section titled 'ONLINE' contains a light blue box with a lightbulb icon and text: 'Define path to your cloud storage. E.g. MyDrive/data/Locus. Necessary subfolders will be created automatically.' Below this, there is a checked checkbox labeled 'Upload backup to cloud'. Under the checkbox, there is a Google Drive icon, a text input field containing 'My Drive/backup/', and a pencil icon for editing. At the bottom right, there are two blue buttons: 'CANCEL' and 'SET'.

## Backup to cloud

Automatically saves Locus settings, points and tracks to your selected directory at Dropbox or Google Drive. Make sure you have **applications of the services installed on your device**.

First use of this feature requires login to your cloud service account.

## Edit and cancel

When the automatic backup is enabled the menu in the entry dialog offers option to edit its properties or cancel it:
