Backup Manager

We strongly recommend to back up your Locus data - **settings, points and tracks**. This tool enables to define **periodic automatic backups** and trigger **one-time backups**. Backup manager is also an essential tool for **transferring the application data from one device to another**.

Automatic Backup

... saves settings, points and tracks periodically to *Locus/backup/auto* directory and optionally to **Dropbox or Google Drive**. How to set it up:

- 1. Enable automatic backup
- Set repetition frequency, number of stored backups and backup to cloud (optional but strongly recommended):

Backup to cloud

Automatically saves Locus settings, points and tracks to your selected directory at Dropbox or Google Drive. Make sure you have **applications of the services installed on your device**.

Repeat every 3 days Keep last 3 backup files INLINE Define path to your cloud storage. E.g. MyDrive/ data/Locus. Necessary subfolders will be created automatically. Upload backup to cloud No path defined
Seep last 3 backup files Image: Second Sec
Define path to your cloud storage. E.g. MyDrive/ data/Locus. Necessary subfolders will be created automatically. Upload backup to cloud No path defined
Define path to your cloud storage. E.g. MyDrive/ data/Locus. Necessary subfolders will be created automatically. Upload backup to cloud No path defined
Upload backup to cloud No path defined
No path defined
CANCEL

- First use of this feature requires login to your cloud service account
- Cloud backup is available only on devices with Android 5.0 and newer

Manual Backup

Saves a single backup file with Locus data to *Locus/backup*/ directory (it can be changed in *settings* > *miscellaneous* > *default directories*). The file name is by default its **time stamp** but it can be changed.

- Backup all creates a backup of all settings, points and tracks in one package.
- Backup settings only creates the settings backup package. Useful if you use various sets of app properties.

Backup sharing

After the backup file is created you can **share** it - **send it to Dropbox, email it, share it on social**

networks etc. Just tap **Solution** in the confirmation box:

Restore

- opens the file browser with the last used drive you can select **local memory (internal or SD** card), Dropbox or Google Drive
- find the backup directory (by default, it is /Locus/backup/) and tap a backup file to restore
- select what content of the package you want to restore:

← Restore	÷
FILE	
2020-11-03_02-19-27_Locus_Map_Pro.zip	
CONTENTS	
Settings	
Points & Tracks	
Cashboard	
Presets	
🗹 Drafts	
Custom online maps config	
	RESTORE

• restart the app
